Academic language instruction and transition

a) Purpose of the Strategy
   i) Develop cognitive academic language
   ii) Build transfer skills
   iii) Reduce code-switching

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher working with student peers or assistant discusses the language of learning and the classroom. Bilingual posters and signs about academic language are posted and referred to regularly. Periodically the teacher will stop a lesson in various content areas and ask students what is being discussed and how the material is being presented, as well as expected academic behaviors.

c) Research base
   i) Law & Eckes (2000)

d) What to watch for with ELL/CLD students
   i) Proficiency in using and understanding academic language will develop and grow with exposure and practice.
   ii) Some ELL/CLD students will have limited or no prior experience in classrooms, instructional settings, or school buildings and will need step by step guidance in the vocabulary and language of instruction and the classroom environment.

Accountability

a) Purpose of the Strategy
   i) Ensure that students are aware of and responsible for their own actions
   ii) Develop awareness of the connection between their actions and the consequences of these actions

b) How to do it
   i) At Tier 1, this strategy is done within the general education classroom with mixed groups of students.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Establish rewards and consequences for completion of work and appropriate behavior, ensuring that these rewards and consequences are consistently implemented. For example, teacher assists the student in setting up an agenda or plan of a personalized list of tasks that the student must complete in a specified time.

c) Research base
   i) Tomlinson (1999)

d) What to watch for with ELL/CLD students
Particular social groups and cultures have different expectations of adult and children when it comes to being accountable for task completion. This is a learned difference between cultures. The teacher needs to be aware that the expectations in an American school may need to be taught directly to CLD students and not just assumed to be understood.

One way to introduce the idea of your classroom rules is to ask students about any rules their parent have for them at home or rules they have learned about crossing the street or playing games. This can then be expanded to the idea of rules for completing tasks and acting appropriately in a classroom.

**Active processing**

a) Purpose of the Strategy
   i) Build awareness of learning
   ii) Develop academic language
   iii) Develop personal control of situations
   iv) Facilitate access of prior knowledge
   v) Reduce low-persistence behaviors
   vi) Reduce off-task behaviors
   vii) Reduce impulsivity

b) How to do it
   i) At Tier 1, this strategy is done with all students in the general education setting. Caution: it can become quite noisy in a large classroom, so be prepared.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Students work through a task aloud, naming each step and asking themselves the appropriate questions for the task. Steps for students to follow in implementing this strategy:
      (1) What is my task?
      (2) What do I need to do to complete my task?
      (3) How will I know my task is done correctly?
      (4) How will I monitor the implementation?
      (5) How do I know the task is correctly completed?
   vi) When applying the Active Processing strategy, students work through problems or tasks using the sequence of self-monitoring questions given below. For example, your students must prepare for the state administered achievement tests required at this grade level, but several of your diverse learners have never taken such tests before and are unfamiliar with this type of evaluation. They have heard stories of something scary that happens to schoolchildren every year and are bracing themselves to endure this external event. You could modify your preparation for this event by integrating the Active Processing strategy into the lessons preceding the testing period. Start by having the students in your class speak out loud with one another in small groups about the content and process of lessons they are learning following the steps in Active Processing. Do this in every content area until the
students are familiar with the process itself. Then a few weeks before the state assessments introduce the concept of standardized achievement tests to your class. Have your students discuss how group and norm measures differ from individual and curriculum based assessments and the implications of this for each participant (step 1 of Active Processing, “What is my task?”). Have the groups discuss what they will need to have with them and what the setting is like. Have those students who have taken tests like this describe the process and what it was like for them. Talk about the expectations of test administrators regarding notes, whispering, looking at others, pencils, calculators, etc. (step 2 of Active Processing, “What do I need to do to complete my task?”). Discuss what an acceptable performance might be for various levels of completion and knowledge. Explain some of the test strategies that help successful test takers even when they are unsure of the answer. Clarify the expectations of parents, teachers, and others about the test activity (step 3 of Active Processing, “How will I know my task is done correctly?”). Provide suggestions for relieving stress during the test and ideas for self-monitoring their progress through the different sections of the test (step 4 of Active Processing, “How will I monitor the implementation?”). Discuss how timekeepers work and what the timelines will be on this test. Discuss ways to identify when it is time to move to another section and what to do when they are finished with the test (step 5 of Active Processing, “How do I know the task is completed?”).

For example, suppose you want your students to complete a new unit in Language Arts about bears in fact and fiction. Some of your diverse learners are not familiar with the concept of fact versus fiction as used on our society and have no words in their native language for this distinction; also several of them have little or incomplete prior schooling. You could modify your preparation for this unit by integrating the Active Processing strategy into the lessons. Begin having the students in your class speak out loud with one another in small groups about what they know about bears and other animals following the steps in Active Processing. Do this within the context of reinforcement and review of prior content the students have successfully accomplished until the students are familiar with the Active Processing process itself. Then introduce the concept of Fact versus Fiction to your class. Have them discuss how these differ using real life experiences from their homes or communities. Use visual and physical examples of the concept, such as a photograph of a car and a sketch or drawing of a car, a realistic portrait of a child and an abstract painting of a child, a picture of astronauts on the moon and a picture of children playing on the moon, etc., to ensure that students are aware of what is involved. Have students discuss examples from their own communities or lives. Discuss how to tell the difference and what is involved in the process (step 1 of Active Processing, “What is my task?”). Have the groups discuss what they will need to compare and contrast fact from fiction and what actions are involved. Have those that are more successful describe the process and what it was like for them to learn it. Talk about the importance of learning this skill and discuss the steps involved. Have your students work in groups to develop a set of “rules” outlining the steps to follow (step 2 of Active Processing, “What do I need to do to complete my task?”). Discuss what an acceptable performance might be for various levels of skill and knowledge. Explain some of the strategies that help students be successful at separating fact from fiction.
Discuss how to check for the accuracy and the steps involved (step 3 of Active Processing, “How will I know my task is done correctly?”). Provide suggestions for relieving stress during the lesson and ideas for self-monitoring their progress through the different steps of the process (step 4 of Active Processing, “How will I monitor the implementation?”). Discuss ways to identify when it is time to move to another question or example and what to do when they have finished each set of comparisons (step 5 of Active Processing, “How do I know the task is completed?”).

viii) Using Active Processing reduces impulsive tendencies and naturally illustrates how a student can use reflection in answering questions and completing tasks.

c) Research base
   i) Law & Eckes (2000)

d) What to watch for with ELL/CLD students
   i) The strategy preparation can be done in the native language or dialect of the students to assure their understanding of your expectations and their task prior to carrying the assignment out in English or other communication mode.
   ii) Students who are less proficient in English will need guidance in using the steps of active processing; the process can be explained and practiced in the students’ most proficient language before going on in English.
   iii) Active processing can be used in any language of instruction and in any content area or age level.

**Advanced organizers**

a) Purpose of the Strategy
   i) Build first language to English transfer skills
   ii) Build awareness of the appropriate content language in English culture/language
   iii) Develop confidence in academic interactions

b) How to do it
   i) At Tier 1, this cognitive strategy is conducted in the general classroom with all students. The teacher or assistant previews lesson content in first language when possible, outlining key issues, rehearsing vocabulary, and reviewing related prior knowledge.
   ii) At Tier 2, this strategy is done with small groups. Teacher has the target student preview lesson for less-advanced students, outlining key issues, rehearsing vocabulary, and reviewing related prior knowledge. Advanced fluency student helps less-advanced students understand how to organize their reading and writing materials.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time. Teacher has the target student preview lesson for less-advanced students, outlining key issues, rehearsing vocabulary, and reviewing related prior knowledge. Advanced fluency student helps less-advanced students understand how to organize their reading and writing materials.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP. Teacher has the target student preview lesson for less-advanced students, outlining key issues, rehearsing vocabulary, and reviewing related prior knowledge. Advanced fluency student helps less-advanced students understand how to organize their reading and writing materials.

v) May use analogy strategy described below to teach one or more of the advanced organizer tools, e.g., KWL+, W-star, Graphic Organizer, Mind Map, etc. Students implement strategy with specific task or lesson.

vi) KWL+ is done by asking the students to discuss the following questions before beginning the lesson: What do you already know about this content? What do you want to know about this content? What will we learn about this? Why should we learn this? And how will we learn this? This may be done on a chart and student answers posted on the chart.

vii) W-Star is done by asking the students to brainstorm before beginning a reading: Who do you think this story/event is about? Where do you think the story/event is located? When do you think the story/event occurs? How do you think the story/event turns out? The answers are written onto the points of a star diagram, each point of which represents one of the “w” questions.

viii) Mind Mapping has various forms but the basic idea is to put the central concept or vocabulary word related to what will be in the lesson in a circle on the board or on a piece of paper. Students then generate other words or concepts related to that main idea and connect them to the center like spokes on a wheel. For each of these ideas or words another set of connections may be made and so on and so on outward from the center concept.

ix) When applying the Advanced Organizer strategy students work through problems or tasks using a sequence of ordering, sequencing, and connecting techniques. Suppose you want your students to write a short personal reflection about the story, “Everyone Cooks Rice” by Norah Dooley, that the class has just finished reading together. You would start by having your students work in small groups of similar ability level. You would show a copy of a graphic organizer form outline (see Chapter 4 of Section II) on the overhead projector or drawn on the white board. Each group would be assigned 2 or 3 of the boxes in the graphic organizer. For example, you might assign the most challenged group to fill in the box about Title, Author, location, and country. Another group would be responsible for the Main & Supporting Characters. Another group would be responsible for identifying the sequence of events in the story and a summary statement about these. Another group could be assigned to identify the main problem faced by the main character. After reading the story through the first time, the groups complete their tasks and you or they write down their answers on the large or projected graphic organizer. Now as a group you ask about how this main problem (finding Anthony) was resolved, the barriers to resolution that Carrie faced, and things in the story that helped Carrie solve her problem. The class can now discuss the final resolution (everyone is home for dinner) and what the moral of the story might be in their perspective. You can expand this activity by comparing and contrasting the story with others like it or with happenings in the students’ own lives.
x) You might now step back from the lesson and discuss the metacognitive learning that you have provided students, the learning to learn lesson that is represented by the strategy you had them use.

xi) Steps for Teaching Advanced Organizers

1) **Inform** the students what Advanced Organizers are, how they operate, when to use them, and why they are useful. Begin by saying that Advanced Organizers are a way to help them (the students) plan and remember. They work by previewing or putting information concerning the lesson or assignment they are working upon into graphic form. Once they learn how to use Advanced Organizers, they can use them anytime and with any content or lesson you give them to do.

2) **Use Cues**, metaphors, analogies, or other means of elaborating on a description of Advanced Organizers combined with visual cues. One way to do this is to have the group look at a blueprint of a house or other building they are familiar with. Have them see how the architect had to plan for everything ahead of time and create a ‘preview’ or graphic image of what everyone was going to have to do to complete the construction. Explain that almost anyone could help construct the house or building by reading the blueprint and the ability to ‘read’ and understand these is a special and critical skill that will be useful to them later in life.

3) **Lead group discussions** about the use of Advanced Organizers. Have students start with talking about a lesson they have just successfully completed. They can go back through the lesson or book using different Advanced Organizer tools to see how they work and what is required. Encourage them to ask you anything about the learning process they want clarified.

4) **Provide guided practice** in applying Advanced Organizers to particular tasks. Work directly with student groups demonstrating and modeling how to identify elements. Have more skilled students demonstrate for the class.

5) **Provide feedback** on monitoring use and success of Advanced Organizers. While students use Advanced Organizers in small groups, you should move around the room listening and supplying encouragement for consistent use of the tools. As students get more comfortable using these tools you can have them monitor one another in the use of the strategy.

c) Research base

iv) Opitz (1998) pp 115-121

v) Harwell (2001) p 214

d) What to watch for with ELL/CLD students

i) There are cultural differences in cognitive/learning style and some ELL/CLD students may not respond to the “brainstorming” construct behind most advanced organizers.

ii) By keeping the graphic design of the advanced organizer as close as possible to the illustrations in the text or some aspect of the lesson, the teacher can more tightly connect the concepts being studied with the what/who/where questioning that precedes the lesson.

iii) This is another activity that works best with preparation in the students’ most proficient language and relevance to their culture before proceeding.
Alternate response methods

a) Purpose of the Strategy
   i) Adapt the mode of response required of students

b) How to do it
   i) At Tier 1, this strategy can be done with all students in a mixed general education classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Students respond to questions in a manner compatible with their needs. Allow a student who has difficulty with writing activities to tape-record his or her answers. Students are allowed to express their understanding of a question or issue in varied ways to meet their individual needs. This practice ensures that students have the best possible chance to show that they have acquired and retained skills and knowledge.
   vi) Example: Students may tape-record their oral responses to questions given in class. For the geography unit, provide the questions in writing for the student to take home and practice responding. Some names of American states are very difficult to pronounce: provide time for the student to work alone or with a peer to write the difficult state names on tag board cards that he or she can hold up during class discussion rather than say aloud.
   vii) Keep in mind Howard Gardner’s work on “multiple intelligences.” What other forms might be available to the student to express her/his understanding? If the topic is westward expansion, the student could find musical examples illustrating the various cultures that came into contact with each other, and could make a mixed sound recording to demonstrate the culture clashes and consequences of expansion. The student could draw a map or other illustration supporting the musical representation and her/his understanding of the geographic concept of the movement of populations from one location to another.

c) Research base
   iii) Gardner, H. (1993a)

d) What to watch for with ELL/CLD students
   i) Some CLD students have had previous schooling in situations where students have no choice in their responses and teachers are authority figures who direct every action in the classroom.
   ii) When the teacher wishes to make student empowerment an instructional goal, this strategy is an excellent direction to take.
   iii) Demonstrate how the various responses can be made, including color, modeling, illustrating, etc.
   iv) Some role play in the process from initial choice to final task completion may be helpful.
Analogy

a) Purpose of the Strategy
   i) Develop higher tolerance
   ii) Facilitate access of prior knowledge
   iii) Build transfer skills
   iv) Develop categorization skills

b) How to do it
   i) At Tier 1, this cognitive strategy can be done in the general education classroom with all students participating. Students may be paired with culture and language peers at first and then mixed pairs of diverse students as they become comfortable with the strategy.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

v) Students each share something they already know about the lesson topic, something that is meaningful to them. They go through the steps of analogy in pairs as they share their items/ideas with one another. Steps for students to follow in implementing this analogy strategy:
   1. What do I already know about this item or concept?
   2. How does what I already know about this idea or item compare with the new idea or item?
   3. Can the known idea or item be substituted for the new item or idea and still make sense?
   4. How can I elaborate on these comparisons through analogies?

vi) A basic description of Analogy is that you have students work through a task describing, comparing and contrasting things that are meaningful to them. They go through the steps of analogy in pairs or groups as they share their items with one another, asking one another five specific questions that guide them through the application of the steps involved in Analogy. Eventually they ask themselves these five self-guiding questions silently as they complete tasks.

vii) An example of a content application of Analogy that I have used is having students compare an object representing a new subject we are going to study with an object they are familiar with, describing the objects and making analogies between the two items. For example, I brought examples of different “dragons” (Chinese, Japanese, English, Javanese, and Scandinavian) to share with students after we had read The Reluctant Dragon by Kenneth Grahame and when we were about to move into a unit on Asia. I had them make analogies between and among the various types of dragons, discussing cultural and linguistic manifestations of these different impressions of and perspectives on a mythological figure. I then had them do expansions related to our Asian unit. The students were to all bring something they had which were meaningful to themselves that was from Asia and share it with others using the analogy strategy. They created Venn diagrams showing the many ways their various objects were similar and different from each other.

viii) Steps for Teaching Analogy
(1) **Inform** the students what Analogy is, how it operates, when to use it, and why it is useful. Begin by saying that Analogy is a tool for learning and remembering. It works by asking and answering a series of five questions concerning the lesson or assignment they are working upon. Once they learn how to use Analogy, they can use it anytime and with any content or lesson you give them to do.

(2) **Use Cues**, metaphors, or other means of elaborating on a description of Analogy combined with visual cues. One way to do this is to have the group compare their jackets or shoes or something else everyone in the class has with them. Have them see how although everyone has the same object there are many ways these are different and many ways they are similar to one another. You can also use favorite stories or activities, anything where a fundamental similarity exists along with distinct differences.

(3) **Lead group discussions** about the use of Analogy. Have students start with talking about a lesson they have just successfully completed. They can go back through the lesson using the Analogy question steps to see how they work and what information is required. Encourage your students to ask you anything about the learning process they want clarified.

(4) **Provide guided practice** in applying Analogy to particular tasks. Here is an example of guided practice as the teacher leads the students through the use of Analogy. Examples of both teacher and student comments are shown.

(a) Teacher-"The first step is to see if you can recall something from your own language or experiences which is similar to this item?"

(b) Student-"What do I know that is like this item? Is there something in my background, language, or experiences which is similar to the item?"

(c) Comparison

(d) Teacher-"Second, examine how these items are similar or different. Do they have similar uses?"

(e) Student-"How are these items similar and different? Are they used in similar ways?"

(f) Teacher-"Third, identify the items or parts of items that might be substituted for these items. Why would this substitution work? Why might it not work?"

(g) Student-"Can I use these similar elements interchangeably? What other items might be substituted for these items?"

(h) Elaboration

(i) Teacher-"Fourth, think about other experiences, words, or actions from your life, language, or culture which are similar to elements of English or your life here in this community. In what ways are they similar and different? How could you use your prior knowledge effectively in new situations?"

(j) Student-"When the teacher asks for examples I can provide them based upon my own experiences and do not have to use American examples. I know that aspects of a new situation may be similar to something I know from my previous experiences."

(5) **Provide feedback** on monitoring use and success of Analogy. While students use Analogy in small groups, you should move around the room listening and supplying encouragement for consistent use of the question and answer steps. As students get more comfortable using this strategy you can have them monitor one
another in the use of the strategy, encouraging each other to ask and/or answer the questions.

(6) Provide generalization activities. Have your students use Analogy for a variety of lessons and tasks. You should be sure to identify the strategy by name and point to the poster or visual cues about the strategy whenever you have students use it. Hold Enhanced cognitive discussions about the use of Analogy in these different lesson settings and encourage discussion of how useful or not useful students found this strategy in particular tasks.

ix) When applying the Analogy strategy, students work through problems or tasks using the above sequence of self-monitoring questions. Let us suppose that you are about to have your students begin a new unit in Social Studies about Immigration nationally and in your state and your local community. You have several students who are newcomers to your community, from a different part of the world and from a culturally and linguistically diverse background. You could modify your usual instructional approach by building in an opportunity for your students to compare and contrast their personal experiences with current immigration and refugee policies and procedures with those in their past experience. You would have them first discuss the difference between ‘immigrant,’ ‘colonist,’ ‘settler,’ ‘emigrant,’ and ‘refugee’ using examples from current news stories on television. You could also have them see videotapes or actually visit an INS office or a center where particular groups of newcomers to America receive services. You then have them share what they know about these terms and services from their personal, current experience (step 1 of Analogy, “What do I know about things like this?”). They could then share how these experiences are similar to others they are familiar with or others in the classroom (step 2 of Analogy, “How is what I know similar to this new thing?”). Then they would discuss the differences between their personal or familiar experiences and what is new to them about the policies, procedures, services, and experiences (step 3 of Analogy, “How is this new thing different from what I know?”). The students could explore how different people’s experiences might change if certain elements of their circumstances were substituted for another (step 4 of Analogy, “Can I substitute what I know for this new thing?”). Now the students would be ready to expand this knowledge to identifying ways to improve current models of service and how they might help other newcomers to the community (step 5 of Analogy, “How can I elaborate on this?”). Discussions will naturally arise out of these lessons about comparing and contrasting based upon High versus Low Tolerance characteristics.

x) Example: Students are shown an object that looks familiar, such as a metal rod used to connect two wheels on a toy car. They generate words describing the rod such as “long”, “shiny”, “manufactured”, “connects”, “an axle”, etc. They then are shown another metal rod that is unfamiliar to them. They generate more words describing the new object. Some of the words will be similar, some different. Example words might be “long”, “shiny”, “threaded ends”, “connects something”, “pointy”, “heavy”, “metallic”, etc. They may actually try to substitute the new rod for the toy axle or they may make guesses about substitution and conclude that it could be done but won’t work exactly. They generate sentences such as “The axle is smaller than the new rod.” “The new rod is larger than the axle of the toy car.” “The new rod has
threaded ends while the axle does not.” “The axle is to a car as the new rod is to something else.” “The axle is as shiny as the new rod is shiny.”

c) Research base
   i) Tovani (2000) has a discussion about making connections between the new and the known on pp 63-78

d) What to watch for with ELL/CLD students
   i) Be sure students are matched with peers with whom they can communicate comfortably while they are all learning the strategy and steps in the process.
   ii) After students learn the process and steps, posters or cards with reminder illustrations and the words of the steps can be put up around the room.
   iii) Once students can use analogy without prompting, they can be paired up with non-bilingual peers for more applications.

Assessment

a) Purpose of the Strategy
   i) Measure performance and set goals and objectives
   ii) Establish baseline performance levels
   iii) Establish target goals

b) How to do it
   i) At Tier 1, this strategy is conducted with the entire classroom in the general education setting to monitor the needs and strengths of all students, establish baseline expectations and norms.
   ii) At Tier 2, this strategy is done with small groups to monitor the needs and strengths of the student in the content being studied, consistently taking into consideration questions of language development and culture shock.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time. Assess the needs and strengths of the student in the content being studied, consistently taking into consideration questions of language development and level of acculturation.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Assess the needs and strengths of the student in the content being studied, consistently taking into consideration questions of language development and level of acculturation and adaptation.
   vi) An example would be: for a geography lesson on the United States, determine the individual student’s general knowledge of the North American continent, countries bordering the United States, the difference between states and countries, how these boundaries are demarcated, etc. What does the student know about the geography of his/her country of origin, or city or state? Determine key vocabulary and sentence structures the student needs to master for the lesson, building on structures and vocabulary that the student has already mastered.

c) Research base

d) What to watch for with ELL/CLD students
i) Non English speaking or very limited English proficient students will need interpreters and lots of modeling and demonstration of how to take a test and how to respond in assessment activities.
ii) Explanations and example products should be given in the students’ most proficient language before moving into English only assessment situations. If this is not done, all assessments will become essentially measures of language proficiency and not assessment of content achievement.
**Bilingual Aide**

**a) Purpose of the Strategy**
   i) Build upon existing language strengths of student
   ii) Develop cognitive academic language
   iii) Build transfer skills
   iv) Build awareness of appropriate academic behavior
   v) Strengthen knowledge of academic content

**b) How to do it**
   i) At Tier 1, this strategy is done within the general education classroom with a bilingual adult working in coordination with the classroom teacher. An instructional assistant or aide fluent in both English and the native or home language of ELL students is available within the classroom to assist ELL/LEP students when possible, regarding content instruction, academic behavior and communication. The bilingual instructional assistant coordinates with the teacher in presenting content area instruction to all students. The aide must be trained in providing bilingual assistance and must plan lessons with the teacher.

   ii) At Tier 2, this strategy is done with small groups. An instructional assistant or aide is available within the classroom to assist ELL/LEP students in home and community language when possible, regarding content instruction, academic behavior and communication. The instructional assistant coordinates with the teacher in presenting content area instruction to all students. The aide must be trained in providing bilingual assistance and must plan lessons with the teacher.

   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time. An instructional assistant or aide is available within the classroom to assist ELL/LEP students in home and community language when possible, regarding content instruction, academic behavior and communication. The instructional assistant coordinates with the teacher in presenting content area instruction to all students. The aide must be trained in providing bilingual assistance and must plan lessons with the teacher.

   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP. An instructional assistant or aide is available within the classroom to assist ELL/LEP students in home and community language when possible, regarding content instruction, academic behavior and communication. The instructional assistant coordinates with the teacher in presenting content area instruction to all students. The aide must be trained in providing bilingual assistance and must plan lessons with the teacher.

**c) Research base**

**d) What to watch for with ELL/CLD students**
   i) When this strategy is used for sequential translation, i.e. the teacher speaks and then the aide speaks, ELL/LEP students may become dependent upon the bilingual aide.
and remain unengaged while the teacher speaks in English, waiting for the interpretation and explanation by the bilingual aide.

ii) Better use would be for the aide to prepare the ELL/LEP students for the English lesson by reviewing key vocabulary words, explaining what will be occurring and discussing what the teacher’s expectations will be for the students’ performance. This would then be followed by the teacher presenting the lesson in English. Students would be given the opportunity to ask for specific clarification only during the lesson.

iii) Students could work on their projects subsequent to the English lesson with the assistance of the bilingual aide as needed. Content discussion and clarification should be in the students’ most proficient language while they are preparing their task or project for presentation in English with the rest of the class.

Bilingual peers

a) Purpose of the Strategy
   i) Build upon existing language strengths of student
   ii) Develop cognitive academic language
   iii) Develop basic interpersonal communication
   iv) Build transfer skills
   v) Develop content knowledge foundation

b) How to do it
   i) At Tier 1, this strategy is done by pairing students within an integrated classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Home and community language peers who are more proficient in English assist home and community language students in specific content area lessons and activities. The peer assistants are given training in being a tutor, with guidelines about how to facilitate learning without doing another’s work, how to translate appropriately, and how to monitor for understanding.
   vi) This can be part of a general classroom buddy system where students are matched up with partners of differing skills for specific activities.

c) Research base

d) What to watch for with ELL/CLD students
   i) With specific first generation refugee, indigenous, migrant and immigrant groups the teacher must be careful about pairing students based on her own perceptions of them coming from similar language backgrounds. There can be cultural and class differences which will make the partners uncomfortable with one another.
   ii) The teacher must be prepared to deal with prejudice between populations where language is the same but culture, class, or racial issues may impede comfort and
communication. American “all togetherness” may come in time, but the teacher must proceed slowly and not push.

iii) Students may interact more as they become more comfortable in the classroom or more trusting that they are accepted and valued.

Bilingual texts

a) Purpose of the Strategy
i) Build upon existing language skills of students
ii) Develop cognitive academic language
iii) Build home and community language-to-English transfer skills
iv) Strengthen knowledge of academic content
v) Develop confidence in academic interactions

b) How to do it
i) At Tier 1, this strategy is facilitates understanding content area instruction within the integrated general education classroom.
ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
v) Duplicate or parallel texts are available in English and home and community language of students for all content areas. Reference texts are available in English, bilingual, or home and community language format. Students are shown how and when to access the texts.
vii) Another source is the National Council for Lifelong Learning and Work Skills (CONEVyT). CONEVyT was created in 2002 in Mexico to provide primary and secondary education and training to adults (15+) left behind in education in that country as well as migrant populations living in the U.S. Through an online portal and a network of Plazas Comunitarias where direct instruction, assessment and varied materials can be found, both U.S. and Mexican governments make educational support available for anyone willing to learn or to teach. For more information go to www.conevyt.org.mx.

c) Research base
v) Ma, J. (2008)

d) What to watch for with ELL/CLD students
i) Not all ELL/CLD students are literate in their home or community language.
ii) Picture dictionaries with bilingual words and definitions are usually the most practical reference to use with younger, less educated students.
Bilingual videotapes about North American speech

a) Purpose of the Strategy
   i) Build upon existing language strengths of student
   ii) Build awareness of appropriate social and academic language
   iii) Build transfer skills
   iv) Develop confidence in school language and rules for academic and social interactions

b) How to do it
   i) At Tier 1 this strategy is used within the general education and ELL classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) This can also be done during parent nights or outside of the school day when including ELL parents and families.
   vi) Groups of students and/or their families view videos developed locally or available from Intercultural Press and other publishers about North American idioms, communication structures and expectations. Best shown with an experienced bilingual facilitator.

c) Research base

d) What to watch for with ELL/CLD students
   i) There are many dialects of spoken English and differences of opinion about what is the “proper” dialect to use as the model for ELL/CLD students.
   ii) The teacher should be aware of the diversity of reaction to specific dialects of spoken English in North America and be prepared to address expressions of prejudice or value judgments about certain speakers shown on the videotapes.
   iii) The most practical way to deal with this is to pre-screen the videos and select segments that most closely represent the dialects common in your local communities plus a few as examples of the diversity that exist in our country.

Building connections

a) Purpose of the Strategy
   i) Develop self esteem
   ii) Encourage pride in home language and culture
   iii) Strengthen home/school relationship

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teachers or assistants establish and support parent-teen support groups and give workshops on learning how to cope with a new environment. Also establish school clubs for specific acculturation issues, holidays, etc.
v) All readers bring to the reading/writing process their own growing knowledge of language, the world and their understandings of how print is used to convey meaning. A child who is often read to, or who regularly sees adults reading and writing for personal tasks and pleasure will expect that reading and writing play useful roles in life and are valued activities. A child who has limited exposure to reading and writing will have very different expectations and understandings. Each of these situations, however, provides some of the background knowledge that children bring to the act of reading and writing.

vi) Effective teaching fosters these expectations of reading and writing as purposeful and meaningful acts, and honors and builds on learners' diverse areas of knowledge through thoughtful selection of reading materials and activities. For example, a child interested in and knowledgeable about dinosaurs will be well equipped to explore a new book about these prehistoric creatures. Another child who is less familiar with dinosaurs may be equally intrigued by the same book, but will benefit from some preliminary introduction to the content. For example, before reading, the child might spend time looking at a variety of pictures of dinosaurs--skeletons as well as "life-like" images, or talking about when they existed, or what they ate.

vii) Activating background knowledge before reading is an important step that is often overlooked in teaching young readers. As an experienced reader, you use your background knowledge automatically, without realizing it. If you are about to read a novel about World War II, subconsciously you summon up whatever images you have about that period both before and as you read. While reading a love poem or an article about baseball, you use your background knowledge about the topics, and also about the literary styles of each. You know that a poem is very different from a novel or news article, in the way it is crafted, in the choice of language, even in its format and length. In each case, you expect the text to make sense because it builds on what you know. At the same time, it may extend or deepen your knowledge and understanding as it adds new ideas or information.

viii) Beginning readers, too, need to learn to use their own background knowledge. Helping them activate and extend this knowledge and selecting texts that build on what they already know or understand about their world support their attempts to make sense of what they are reading. If students do not have any background knowledge on the topic of the reading material that is to be used, then every effort should be made to build that knowledge through prior discussion, looking at pictures or objects, or through other means before introducing the new text. That will lead to much greater success with the reading experience.

c) Research base
   i) Carrigan (2001) p 49

d) What to watch for with ELL/CLD students
   i) Learning to survive and thrive in a new environment is challenging for anyone. This can be especially difficult for ELL and CLD learners and their families.
   ii) Small social support groups within school and within the community can provide a ‘safe’ group within which to ask questions and learn ways to succeed at tasks or in solving problems.
Choices

a) Purpose of the Strategy
   i) Provide students the opportunity to select one or more activities developed by the teacher
   ii) Alleviate power struggles between teacher and student
   iii) Reduce fears associated with assignments

b) How to do it
   i) At Tier 1, this strategy can be done with all students in a mixed general education classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Teacher provides two or more different reading selections of interest to the student, both of which address the same desired objective. Allow the student to choose one of the selections for the assignment. If student does not choose either of the selections, introduce a third selection or ask student to choose a content-appropriate reading selection.
   vi) The readings can be leveled as well as different takes on the same subject. National Geographic and Hampton Brown have excellent leveled reading materials on a wide variety of topics.

c) Research base

d) What to watch for with ELL/CLD students
   i) Some CLD students have had previous schooling in situations where students have no choice and teachers are authority figures who direct every action in the classroom.
   ii) When the teacher wishes to make choice and student empowerment an instructional goal, this strategy is an excellent direction to take.
   iii) Demonstrate how the choice has to be made, including color coding or otherwise graphically illustrating the different choices.
   iv) Some role play in the process from initial choice to final task completion may be helpful.

Class buddies / Peer helpers / Peer tutors

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Develop basic interpersonal communication
   iii) Develop cognitive academic language
iv) Develop content knowledge foundation  
v) Develop higher tolerance  
vi) Develop positive peer relationships  
vii) Develop thinking and planning skills  
viii) Improve retention  
ix) Utilize prior knowledge  

b) How to do it  
i) At Tier 1, this strategy is done with all of the students in the general education classroom.  
ii) At Tier 2, this strategy is done with small groups.  
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.  
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.  
v) Students assist in the classroom by working with other students. Tutors may receive training about objectives, reinforcement, etc. A student who has mastered a list of sight words or math facts presents these items on flash cards to another student needing assistance in this area. Students help other learners of similar or different ages in the classroom to complete assignments or other responsibilities. This strategy has been shown to provide learning gains for both the tutor and the tutee, and allows for the teacher to work closely with more students. The teacher should always be clear about the objectives of the tutoring session, and hold the students accountable for their work.  
vi) Example: The tutoring student shares her/his report with the tutee. In preparation, the tutor identifies key concepts and vocabulary used in the report, and presents these on tag board cards to the tutee. The tutee tells the tutor in his/her own words, what he or she understood from the report.  
vii) Home and community language peers who are more proficient in English assist home and community language students in specific content area lessons and activities. The peers are given training in being a tutor, with guidelines about how to facilitate learning without doing another’s work, how to translate appropriately, and how to monitor for understanding.  
viii) Expansion: Peer helpers develop code of ethics and their own guidelines for tutoring.  
ix) As students become more comfortable, they may be paired with more diverse peers and tutors.  

c) Research base  

d) What to watch for with ELL/CLD students  
i) With specific first generation refugee, indigenous, migrant and immigrant groups the teacher must be careful about pairing students of based on her own perceptions of them coming from similar language backgrounds. There can be cultural and class differences which will make the partners uncomfortable with one another.  
ii) The teacher must be prepared to deal with prejudice between populations where language is the same but culture, class, or racial issues may impede comfort and
communication. American “all togetherness” may come in time, but the teacher must proceed slowly and not push.

iii) Students may interact more as they become more comfortable in the classroom or more trusting that they are accepted and valued.

### Classroom and school survival strategies

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Develop personal control of situations
   iii) Improve confidence in school interactions
   iv) Reduce distractibility
   v) Reduce acting out behaviors
   vi) Develop confidence in cognitive academic interactions

b) How to do it
   i) At Tier 2, this strategy is done with small groups. Teacher and assistant demonstrate how to get around the school, what is expected of students in various school and learning interactions.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time. Teacher and assistant demonstrate how to get around the school, what is expected of students in various school and learning interactions.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP. Teacher and assistant demonstrate how to get around the school, what is expected of students in various school and learning interactions.
   iv) Primary grades: Intermediate student, peer or specialist demonstrates how to act in a given school or school culture situation. The situation is explained, in home and community language when possible, and each stage is modeled. Students then practice each stage of the interaction with familiar participants until comfortable and successful in appropriate behaviors.
   v) Intermediate: Secondary student, peer or specialist demonstrates how to act in a given school or school culture situation. The situation is explained, in home and community language when possible, and each stage is modeled. Students then practice each stage of the interaction with familiar participants until comfortable and successful in appropriate behaviors.
   vi) Secondary: Older peer or specialist demonstrates how to act in a given school or school culture situation. The situation is explained, in home and community language when possible, and each stage is modeled. Students then practice each stage of the interaction with familiar participants until comfortable and successful in appropriate behaviors.

c) Research base
   ii) Brownlie & King (2000) pp 59-74

d) What to watch for with ELL/CLD students
i) Particular social groups and cultures have different expectations of adult and children when it comes to learning. This is a learned difference between cultures. The teacher needs to be aware that the expectations in an American school may need to be taught directly to CLD students and not just assumed to be understood.

ii) One way to introduce the idea of behavior and strategies specific to your classroom is to ask students about how their parents have them behave at home or learned playing games. This can then be expanded to the idea of acting appropriately in a classroom.

iii) Demonstrate all of the desired behaviors and strategies. Some role play may be helpful. Examples of bad behaviors may be used with caution.

Cognitive strategies in home and community language

a) Purpose of the Strategy
   i) Improve motivation
   ii) Minimize behavior problems
   iii) Build transfer skills
   iv) Develop cognitive academic language
   v) Reduce code-switching

b) How to do it
   i) At Tier 1, this strategy facilitates the transition of ELL/CLD students from their primary language base to bilingualism and helps with their interaction with all students in the general education classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Teacher working with student peers or assistant discusses the academic language of learning and of the classroom in both English and in the home and community language, when possible. Bilingual posters and signs about cognitive academic language proficiency are posted and referred to regularly.
   vi) Expansion: Periodically, the teacher will stop a lesson in various content areas and ask students to discuss what is being presented and how, and what academic behaviors are expected.

c) Research base
   i) Strickland, Ganske, & Monroe (2002)

d) What to watch for with ELL/CLD students
   i) Not all ELL/CLD students are academically fluent in their home or community language.
   ii) Graphics and illustrations representing the cognitive strategies may be used on posters or individual cue card sets for the students. These can be bilingual.
Concurrent language development/acquisition sessions for students & parents

a) Purpose of the Strategy
   i) Build awareness of appropriate communication behaviors for school language and rules
   ii) Improve confidence in home and community culture/school culture interactions
   iii) Build upon the diverse language foundations of students and parents
   iv) Strengthen school/parent partnerships
   v) Reduce culture shock
   vi) Reduce anxiety and stress

b) How to do it
   i) At Tier 1, this strategy is an effective way to improve readiness among students while building communication with their parents.
   ii) At Tier 2, this strategy is conducted with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Classes are provided at a time selected by parents. Parents and adults participate in English as a second language instruction in one room while the students receive home and community language instruction (when possible) and academic content support in another room. After the formal class period, the groups reunite and parents practice bilingual educational games they can play at home with their children.

c) Research base
   ii) Law & Eckes (2000)
   iii) Brownlie & King (2000)

d) What to watch for with ELL/CLD students
   i) This is most effective with large communities of one language and more difficult to implement where there are separate families or small groups speaking various and diverse languages.
   ii) In multi-language family communities, focus can remain on English as a second language with first language support offered for as many languages as you have access to bilingual personnel.

Consistent Sequence

a) Purpose of the Strategy
   i) Build academic transfer skills
   ii) Build awareness of appropriate academic behaviors
   iii) Improve confidence in academic interactions
   iv) Reduce distractibility

b) How to do it
   i) At Tier 1, this strategy is done within the general education classroom with all students.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

v) The teacher presents all content lessons with the same instructional language and direction sequence to the extent possible.

vi) Posters can be put up around the room with the lesson process and the teacher may point to each step as she/he goes through the lesson.

vii) Expansion: Students can role-play giving the directions themselves.

c) Research base

d) What to watch for with ELL/CLD students

i) This strategy is consistent with the Sheltered Instruction Observation Protocol (SIOP) model used in many ELL programs.

ii) Newcomers who have never attended school may become confused if every lesson and activity occur in seemingly random patterns. They do not know what is expected of them at various stages of the lesson. They do not know what to attend to and what is less important.

iii) This is also going to impact students with undiagnosed attention deficit disorders that they have not yet learned to accommodate.

iv) Better to start out with simple consistent steps and add as students become comfortable and familiar with what is going to happen in the classroom.

**Content modification**

a) Purpose of the Strategy

i) Adapt content to meet individual or unique student needs

ii) Improve motivation and response

iii) Reduce frustration

b) How to do it

i) At Tier 2, this strategy is done with small groups.

ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.

iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iv) Teacher uses subject matter, rather than specific linguistic skill exercises, to teach English to students with limited proficiency in English. Allow student who has difficulty with writing activities to tape-record his answers.

c) Research base

d) What to watch for with ELL/CLD students

i) This can be done in any language and content lesson, but will need to be explained in student’s most proficient language.

ii) Provide lots of practice and modeling.
iii) When presenting a topic, the teacher can ask students for what specifically they would like to learn about this topic.

**Context embedding**

a) Purpose of the Strategy  
   i) Develop content knowledge foundation  
   ii) Develop cognitive academic language proficiency  
   iii) Develop content area skills

b) How to do it  
   i) At Tier 1, this strategy is used with all students in the general education classroom in all content areas at the beginning of every lesson.  
   ii) At Tier 2, this strategy is done with small groups.  
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.  
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.  
   v) The teacher presents lessons with concrete, physical models and demonstrations of both content and expected performance. Language is simplified and content focused. Lessons address real life situations and learning.  
   vi) Students are encouraged to work in small groups on content-focused activities and to discuss lessons in home and community language.

c) Research base  

d) What to watch for with ELL/CLD students  
   i) Vocabulary may be previewed with fluent speakers in the students’ most proficient language.  
   ii) Some cultures may have strictures against children handling or being too close to certain objects. Always screen items ahead of time with knowledgeable community members.

**Context-embedded instruction (sheltered techniques)**

a) Purpose of the Strategy  
   i) Reduce distractibility  
   ii) Develop cognitive academic language proficiency  
   iii) Develop content area skills  
   iv) Develop personal control of situations  
   v) Develop cognitive academic language proficiency  
   vi) Develop personal control of situations  
   vii) Reduce distractibility

b) How to do it  
   i) At Tier 2, this strategy is done with small groups.  
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iv) Teacher always presents lessons with concrete, physical models and demonstrations of both content and expected performance. Language is simplified and content focused.

v) Expansion: Students are encouraged to discuss lesson in home and community language and work in small groups on content activities.

c) Research base

d) What to watch for with ELL/CLD students
   i) Building familiarity is critical for the success of this strategy. Not all ELL/CLD students will know what the objects or models represent.
   ii) The teacher will need to introduce the models or objects in full scale representations or use the actual items to build a true understanding. Only after students have actually seen, felt, smelled, and possibly tasted an apple will they respond to a picture of an apple.

Contracting

a) Purpose of the Strategy
   i) Clarify responsibilities, assignments, and rewards
   ii) Improve motivation

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Establish a verbal or written mutual agreement between teacher and student.
   v) For example, a written document with agreement that the student will complete 20 math problems with 80% accuracy during the regular math period. Student will receive 10 minutes of extra free time if contract conditions are met.

c) Research base

d) What to watch for with ELL/CLD students
   i) Contracts will need to be explained in the students’ most proficient language.
   ii) Examples should be provided from their own family or community experience.

Cooperative learning strategies

e) Purpose of the Strategy
   i) Build transfer skills
   ii) Develop confidence in cognitive academic interactions
   iii) Develop higher tolerance
iv) Improve access to prior knowledge  
v) Reduce distractibility  
f) How to do it  
i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.  
ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.  
iii) Teacher works with students who are most acculturated to model what is expected and how cooperative learning activities occur. Teacher facilitates various cooperative learning activities, varying setting and content of focus only after students have clear understanding of what they are to do in the different approaches. Home and community language explanations of what is expected are provided when possible.  
g) Research base  
h) What to watch for with ELL/CLD students  

Coping/Problem solving  
a) Purpose of the Strategy  
i) Build awareness of learning process  
ii) Develop extended time on task  
iii) Develop higher tolerance  
iv) Develop problem-solving skills  
v) Lower anxiety levels  
vi) Develop personal control of situations  
b) How to do it  
i) At Tier 1, this strategy is taught to an entire classroom of integrated mixed learners in the benchmarked general education program.  
ii) At Tier 2, this strategy is done with small groups.  
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.  
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.  
v) Teacher directs students to identify specific problem(s) they want to solve as a group. Each group follows the coping steps as they address their problem, writing down their answers and ideas for each stage.  
vi) Steps for students to follow in implementing the Coping strategy:  
(1) What is the problem?  
(2) What are possible solutions?  
(3) What is my action plan?  
(4) Where can I go for help?  
(5) When should I start?  
(6) How will I deal with setbacks?  
(7) What is my outcome?  
vii) When applying the Coping strategy, students work through problems or tasks using the above sequence of self-monitoring questions. Let us suppose that you are about
to have your students begin a new unit in Social Studies about your local community services and service people. You tend to enjoy challenges and usually teach these lessons by having students “discover” local resources and people on their own, but you have several students who are new to your community and from a culturally and linguistically diverse background. You could modify your usual instructional approach by building in an opportunity for your students to examine what your expectations are and identify any problems they may have in meeting your expectations (step 1 of Coping, “What is the problem?”). The student groups then would identify what they will do to successfully complete the lesson (step 2 of Coping, “What are my action steps?”), discussing ahead of time who they might see, where they might go and what might happen. This might include identifying vocabulary words and discourse patterns they will need to use and possibly some practice ahead of time in speaking with adults from different speech communities from their own. They identify ahead of time where sources of information and assistance are available to them (step 3 of Coping, “Where can I go for help?”) including people at the school, church or other community groups. During this planning time, they also discuss what might happen to prevent them getting information or achieving parts of your outcomes. They come up with a supportive, group plan for dealing with barriers in accomplishing their tasks (step 4 of Coping, “How will I deal with setbacks?”). Finally, they create a clear idea in their minds of what exactly an acceptable outcome of this activity will be (step 5 of Coping, “What will my outcome be?”). By following these steps and keeping all of this in mind while working on the lesson you have for them, they will greatly reduce their anxiety level about the task and will increase their likelihood of completing the task successfully.

c) Research base

d) What to watch for with ELL/CLD students
   i) The strategy preparation can be done in the native language or dialect of the students to assure their understanding of your expectations and their task prior to carrying the assignment out in English or other communication mode.

Cross-cultural communication strategies

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Build awareness of appropriate communication behaviors for school language and rules
   iii) Develop confidence in school language and rules for academic and social interactions

b) How to do it
   i) At Tier 1, this strategy facilitates the transition of ELL/CLD students from their primary language base to bilingualism and helps with their interaction with all students in the general education classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

v) The teacher models cross-cultural communication strategies such as reflection, proximics, latency, and active listening. Reflection is positioning yourself in an almost mirror image to the posture of the other person, using similar rate of speech. Proximics is paying attention to how close you are to the other speaker and latency is the culturally learned length of time between one speaker’s turn and the next speaker’s turn to speak. Active listening is showing that you are paying attention and responding in culturally appropriate ways to indicate your attention. This may include repeating some portion of what was said.

vi) The teacher has the students practice using these strategies in a variety of interactions.

c) Research base

d) What to watch for with ELL/CLD students
   i) All cultures have different morés about how close you can stand or sit next to another person (proximics), who or what you may touch, how much time should elapse before you speak after another person (latency), etc. The teacher should become familiar with these differences regarding the students in this classroom.
   ii) The strategy of reflection can look like mockery and mimicry if not done with sensitivity. The goal is to reflect, not imitate the mode of the speaker.

Cross-cultural counseling

a) Purpose of the Strategy
   i) Enhance awareness of school adaptation process
   ii) Reduce anxiety and stress
   iii) Develop personal control of situations

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

   iv) Primary grades: Teachers and assistants receive training in cross-cultural stress response patterns and interventions for use in the classroom.
   vi) Secondary grades: Specialist with training in cross-cultural stress responses and culture shock provides counseling and guidance.

c) Research base
d) What to watch for with ELL/CLD students
   i) Many cultures have adverse reactions to “official” personnel getting involved with
      the family and particularly with someone telling them how to raise their children.
   ii) The specialist facilitating the counseling must be trained not only in cross-cultural
      techniques but also familiar with the particular culture and language of the family
      being assisted.

Cross-cultural counseling for families

a) Purpose of the Strategy
   i) Develop personal control of situations
   ii) Enhance student interaction with family during transition
   iii) Facilitate family adaptation to new community
   iv) Reduce anxiety and stress
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be
       included in the IEP.
   iv) Specialist with training in cross-cultural stress responses and culture shock provides
       family counseling and guidance.

Research base
   i) Carrigan (2001)
   ii) Law & Eckes (2000)
   iii) Brownlie & King (2000)

d) What to watch for with ELL/CLD students
   i) Many cultures have adverse reactions to “official” personnel getting involved with
      the family and particularly with someone telling them how to raise their children.
   ii) The specialist facilitating the counseling must be trained not only in cross-cultural
      techniques but also familiar with the particular culture and language of the family
      being assisted.
Demonstration

a) Purpose of the Strategy
   i) Improve confidence in academic interactions
   ii) Reduce distractibility
   iii) Build academic transfer skills
   iv) Develop content knowledge foundation

b) How to do it
   i) At Tier 1, this strategy can be used in any lesson and in any classroom by teachers, peer tutors, instructional assistants, and volunteers.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The teacher, assistant or peer demonstrates the content of the lesson. The content is explained in the home and community language when possible, and each aspect of the lesson is demonstrated.
   vi) Students demonstrate their understanding of the lesson and content.
   vii) Activities and assessment are designed to facilitate demonstration of understanding.

c) Research base

e) What to watch for with ELL/CLD students
   i) This strategy is consistent with both SIOP and the Guided Language Acquisition Design (GLAD) process used in many ELL programs.
   ii) Students who have never been schooled before will not know what is expected and will benefit from concrete direct demonstrations of content elements and activity expectations.

Double-entry

a) Purpose of the Strategy
   i) Double entry is a method of taking comprehensive notes as well as reflecting on what is read.

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) Students divide a piece of paper in half, length-wise. In the left hand column, they copy sentences or summarize a passage. In the right hand column, they write down their interpretation, inferences, and critical thinking about the passage. This activity can also be done as a journal in which the pages are divided into the two columns.

c) Research base
   i) Tovani (2000) pp 30-32
   ii) Strickland, Ganske, & Monroe (2002) p 204

d) What to watch for with ELL/CLD students
i) This is an easy strategy to assist students who are beginning to do more reading and writing to organize and think about what they are reading.

ii) This can be done in any language in which the students are literate.
Evaluation

a) Purpose of the Strategy
   i) Build awareness of learning process
   ii) Develop categorization skills
   iii) Develop extended time on-task
   iv) Develop personal control of situations
   v) Strengthen awareness of learning process
   vi) Develop guidelines for strategy choice
   vii) Develop field sensitive skills
   viii) Develop higher persistence
   ix) Lower anxiety levels
   x) Reduce confusion in locus of control

b) How to do it
   i) At Tier 1, this strategy is used in the general education classroom with all students.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The teacher introduces the students to the strategy by explaining that a strategy is a tool to help them learn and evaluation is one of these tools or strategies.
   vi) The teacher's goals in developing the student's evaluation strategy skills include increasing the student's awareness of what he or she needs to do to complete a given task, providing the student with concrete guidelines for selecting and using appropriate specific strategies for achievement, and guiding the student in comprehensive monitoring of the application of the strategy. These goals are accomplished through modeling, demonstrating, and describing the purpose or rationale for using the strategy. This, in turn, assists students to become aware of: the types of tasks or situations where the strategy is most appropriate; the range of applications and transferability; the anticipated benefits from consistent use; and, the amount of effort needed to successfully deploy the strategy.
   vii) The teacher takes the students through the steps, pointing at a poster or diagram of the four steps. The first step is to think about how to identify what a problem consists of and how it can be measured and completed. The second step is to identify all the components of the problem and all the elements needed to solve it or to complete the task. The third step is to plan ahead for difficulties and to identify where and how to get feedback and assistance. The fourth and final step is to think about ways to generalize the lesson learned and how to apply the information in other settings and contexts.
   viii) Students use index cards with the steps for the evaluation strategy on them to cue themselves for each step. They select a specific problem or task and use the cards as mnemonics as they proceed through the assignment.
   ix) Steps for students to follow in implementing the strategy:
      (1) How will I analyze the problem?
      (2) What are the important elements of this problem?
(3) How will I get feedback?
(4) How can I generalize the information?
x) Steps for Teaching Evaluation

1) **Inform** the students what Evaluation is, how it operates, when to use it, and why it is useful. Begin by saying that Evaluation is a way to help them analyze and monitor their learning. It works by asking and answering the above series of five questions concerning a lesson they are working upon. Once they learn how to use Evaluation, they can use it anytime and with any content or lesson you give them to do.

2) **Use cues**, metaphors, analogies, or other means of elaborating on a description of Evaluation combined with visual cues. One way to do this is to have the group watch a panel discussion or other presentation on television where a group is analyzing a problem or evaluating a proposal to do something. Another is to show a video of scientists working in a laboratory to evaluate whether a substance works effectively. Show how everyone can analyze, monitor and control learning when he or she goes step by step.

3) **Lead group discussions** about the use of Evaluation. Have students start with talking about a science or math lesson they have just successfully solved. They can go back through the lesson or interaction stopping to show how each step of the lesson can be analyzed and monitored using the Evaluation steps to see how they work and what is required. Encourage them to ask you anything about the learning process they want clarified.

4) **Provide guided practice** in applying Evaluation to particular tasks. Here is an example of guided practice as the teacher leads the students through the use of Evaluation. Examples of both teacher and student comments are shown.

(a) Teacher-"First, you must analyze the task to determine what it requires. This includes items such as materials, time, space, or types of actions. What is the expected outcome of the task? What steps must you follow in order to complete the task? Review other completed assignments to determine possible steps you might take to complete this task."

(b) Student-"What do I need to do to complete this task, and do I have all necessary materials and resources? What should the expected outcome look like? What steps must I follow to effectively achieve the expected outcome?"

(c) Teacher-"Second, after you have analyzed the task, you must identify possible strategies that might be used to accomplish the task. Think about strategies you have used in the past to complete similar tasks. One or more of these may be necessary to complete this task."

(d) Student-"What strategies do I know that might be appropriate for this particular task? Why might these be useful in this particular situation?"

(e) **Strategy Implementation**

(f) Teacher-"Third, prior to using a selected strategy, review the steps in that strategy. Remember that one strategy may be used in several different situations and different situations may require the use of more than one strategy."

(g) Student-"I’ve selected these strategies for this task. I’ll review the process associated with each strategy prior to implementation. I’ll use these strategies
while I complete this task."

(h) Feedback
(i) Teacher-"Fourth, you must become aware of how useful it is to use the strategies you have selected. They assist you to complete the task accurately and efficiently. Periodically reflect upon how you are doing and how effective the strategy is for completing the task at hand."
(j) Student-"How useful is this strategy for this particular task? Is this strategy helping me to accurately and efficiently confront the assigned task? Do I need to use a different strategy?"
(k) Teacher-"Finally, think of other previously completed tasks where use of one or more of these strategies would have been beneficial to confronting the tasks. Could you have completed those tasks more efficiently had you used these strategies? Think of other types of tasks or future tasks where you might appropriately use one or more of these strategies."
(l) Student-"Why were these strategies useful to this particular task? In what other types of situations would the use of these strategies be beneficial?"

(5) Provide feedback on monitoring use and success of Evaluation. While students use Evaluation in small groups, you should move around the room listening and supplying encouragement for consistent use of the question and answer steps. As students get more comfortable using this strategy you can have them monitor one another in the use of the strategy, encouraging each other to ask and/or answer the questions.

(6) Provide generalization activities. Have your students use Evaluation for a variety of lessons and tasks. You should be sure to identify the strategy by name and point to the poster or visual cues about the strategy whenever you have students use it. Hold Enhanced cognitive discussions about the use of Evaluation in these different lesson settings and encourage discussion of how useful or not useful students found this strategy in particular tasks.

c) Research base
i) Opitz (1998) p 61

d) What to watch for with ELL/CLD students
i) Since these students may be limited in English proficiency, the monolingual English-speaking teacher must increase the amount of demonstration and visual cues and rely less upon verbal descriptions and cues. If available, bilingual assistance from peers or other education personnel may be useful in translating what is discussed in the classroom. This is especially important in order to provide explicit information to students concerning the rationale and value of the strategy. In addition, analogy elaboration of the evaluation strategy may be drawn from the students' cultural and linguistic backgrounds. This reinforces the validity of the students' previous successful learning and increases the ability of the students to make associations that will strengthen their cognitive development.

ii) Students who have never been in school before will not know what is expected of them and what measuring, analyzing and evaluating look like.
iii) Some translation and discussion in the ELL students’ more proficient language may be necessary to clarify what is to be done and why.

**Expectations awareness/review**

a) Purpose of the Strategy
   i) Ensure that each student is familiar with specific academic and behavioral expectations
   ii) Reduce frustration in students due to unclear expectations
   iii) Minimize ambiguity in classroom

b) How to do it
   i) At Tier 1, this strategy is done with the entire general education classroom population.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The teacher modifies or breaks down general classroom rules into specific behavioral expectations, to ensure that each student knows exactly what is meant by acceptable behaviors.
   vi) Illustrations and demonstrations of the desired behaviors and rules should be posted around the room.

c) Research base

d) What to watch for with ELL/CLD students
   i) Particular social groups and cultures have different expectations of adult and children when it comes to being accountable for task completion. This is a learned difference between cultures. The teacher needs to be aware that the expectations in an American school may need to be taught directly to CLD students and not just assumed to be understood.
   ii) One way to introduce the idea of your classroom rules is to ask students about any rules their parent have for them at home or rules they have learned about crossing the street or playing games. This can then be expanded to the idea of rules for completing tasks and acting appropriately in a classroom.
   iii) Demonstrate all of the desired behaviors and rules. Some role play may be helpful. Examples of bad behaviors may be used with caution.

**Experience-based learning**

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Develop cognitive academic language
   iii) Develop content knowledge foundation
   iv) Facilitate analogy strategies
b) How to do it
   i) At Tier 1, this strategy can be done in the general education classroom with all students participating. Students may be paired with culture and language peers at first and then mixed pairs of diverse students as they become comfortable with the strategy.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Primary level: Teacher presents lessons with concrete reference to specific experiences in which students have participated. Activity may be paired with field trips or other shared experiences; may be in reference to prior life experiences of ELL/LEP students. Community members may make presentations about events significant to students’ families. Teacher then has students tell what their illustrations depict and writes down verbatim what the students say. Students then read back to the teacher what has been written.
   vi) Intermediate and secondary levels: teacher guides students to illustrate and write their own stories about their experiences. These stories can be put into collections and bound for use by other students. Stories can be kept in the classroom, library or media center.

c) Research base

d) What to watch for with ELL/CLD students
   i) Some shared experiences will be very novel for particular cultural members of a group, more so than for other members. Be sure to give those who have never seen something before, extra preparation time and explanations of what they are going to see or do during the field trip or experience.
   ii) Be sure students are matched with peers with whom they can communicate comfortably while they are all learning the strategy and steps in the process.
   iii) Be sensitive to cultural mores about certain experiences and businesses. You may need to spend extra time discussing what is going to be seen and heard, or in some cases prepared to have some students participate in a related but separate activity.

Exploration
   a) Purpose of the Strategy
   b) How to do it
      i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iii) Teacher actively engages students in constructing mathematical knowledge through the use of activities that encourage them to explore and investigate mathematical ideas. For example, students visit a garden and observe, count and measure the different petals that are attached to different species of flowers. Students could also explore the different configurations in which leaves grow on each stem.

c) Research base

d) What to watch for with ELL/CLD students
   i)
Family-centered learning activity

a) Purpose of the Strategy
   i) Build awareness of academic expectations
   ii) Build awareness of appropriate school language and rules for academic and social behaviors
   iii) Build upon family language and culture
   iv) Strengthen school/parent partnerships

b) How to do it
   i) At Tier 1, this strategy is useful in building family involvement in school as well as strengthening the support at home for student learning.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Evening learning activities are offered to families centered on specific content areas. For example, Family Math, Family Computer, and Family Literacy Nights, offering several interactive activities, provide an educational and fun setting for all. Parents benefit from home and community language explanations when possible, about education outcomes, and how they can help students at home.
   vi) These activities can be done bilingually or wholly in the family language. If Spanish speakers, you can tie into the existing Spanish language computer, math, science and language materials available online from CONEVyT.

c) Research base

d) What to watch for with ELL/CLD students
   i) It is important to tie these extracurricular activities into general classroom content areas. These can be a point of academic content support by offering the activities in the home language of participants as well as having bilingual personnel available.
   ii) The Mexican government offers free materials and textbooks that can supplement these activities for Spanish speaking families. Contact the Mexican embassy or consulate closest to you to find out more. An example of what the Mexican government offers is National Council for Lifelong Learning and Work Skills (CONEVyT). CONEVyT was created in 2002 in Mexico to provide primary and secondary education and training to adults (15+) left behind in education in that country as well as migrant populations living in the U.S. Through an online portal and a network of Plazas Comunitarias where direct instruction, assessment and varied materials can be found, both U.S. and Mexican governments make educational support available for anyone willing to learn or to teach. For more information go to www.conevyt.org.mx.
**Guided lecture procedure**

a) Purpose of the Strategy  
i) Provide students with a structure for taking notes during lectures
b) How to do it  
i) At Tier 2, this strategy is done with small groups.
ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
iv) Group activity is involved to facilitate effective note taking. Students listen to teacher or student presentation. Speaker pauses periodically to allow groups to compare notes and fill in missing information.

c) Research base  

d) What to watch for with ELL/CLD students  
i) This strategy is especially useful with upper elementary and secondary students. The teacher may need to physically model how to listen and take notes appropriately.
ii) Not all students will have prior educational experiences where they have listened to someone present and are then responsible for taking notes or developing commentary about what was said.
iii) This can be paired with general guided practice in test preparation and test taking.

**Guided memories**

a) Purpose of the Strategy  
i) Build transfer skills
ii) Facilitate discussion about new learning
iii) Strengthen school/parent partnerships
b) How to do it  
i) At Tier 1, this strategy is done in general education and integrated classrooms where all students participate in the activity. The teacher selects the events or length of time to cover, e.g. two years, five years, or such as appropriate to the age and developmental level of the students. The teacher gives the students an event in time or a length of time as a framework. The students research and then tell about their personal or family history during this event or length of time. Students may create booklets about their memories, their families, etc.
ii) At Tier 2, this strategy is done with small groups. Students tell about their homeland or family history and create booklets about their memories.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time. Students tell about their homeland or family history and create booklets about their memories.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP. Students tell about their homeland or family history and create booklets about their memories.

c) Research base
i) Carrigan (2001)

d) What to watch for with ELL/CLD students
i) Students may be reluctant to describe or discuss what happened to their family during this time period or specific event. Very difficult or painful things may have occurred for this student or family.
ii) The teacher must be prepared to deal with sensitive information should it arise and also to know when not to push further for information. Only elicit information that the student is comfortable sharing at that particular point in time.
iii) Students may share more as they become more comfortable in the classroom or more trusting that the information will not be used against them or their family.

Guided practice & planned interactions with different speakers

a) Purpose of the Strategy
i) Build transfer skills
ii) Build awareness of appropriate school language and rules for communication behaviors
iii) Develop confidence in school language and rules for academic and social interactions
iv) Develop cognitive academic language
v) Develop personal control of situations
vi) Reduce anxiety in social/academic interactions
vii) Reduce response fatigue

b) How to do it
i) At Tier 1, this strategy facilitates the transition of ELL/CLD students from their primary language base to bilingualism and helps with their interaction with all students in the general education classroom.
ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
v) Peer or specialist demonstrates how to act or speak in a given school culture situation. The situation is explained in the home and community language when possible, and each part of the situation is modeled.
vi) Representatives of the mainstream school language and rules who are familiar to the learners come into the classroom and act out the situation with the instructor. Students then practice each part of the interaction with these familiar participants until comfortable with the interaction. Expansion: Students select new interactions they wish to learn.

c) Research base
d) What to watch for with ELL/CLD students
i) It is important to have the example speakers be people with whom the students are familiar and comfortable.
ii) This can be paired with role play of school interactions.

**Guided practice in classroom behavior expectations & survival strategies**

a) Purpose of the Strategy
i) Build transfer skills
ii) Develop personal control of situations
iii) Improve confidence in school interactions
iv) Reduce distractibility
v) Reduce acting out behaviors
vi) Develop confidence in cognitive academic interactions

b) How to do it
i) At Tier 1, this strategy is done with the entire general education classroom population.
ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP
v) Primary grades: Intermediate student, peer or specialist demonstrates how to act in a given school or school culture situation. The situation is explained, in home and community language when possible, and each stage is modeled. Students then practice each stage of the interaction with familiar participants until comfortable and successful in appropriate behaviors.
vi) Intermediate: Secondary student, peer or specialist demonstrates how to act in a given school or school culture situation. The situation is explained, in home and community language when possible, and each stage is modeled. Students then practice each stage of the interaction with familiar participants until comfortable and successful in appropriate behaviors.

vii) Secondary: Older peer or specialist demonstrates how to act in a given school or school culture situation. The situation is explained, in home and community language when possible, and each stage is modeled. Students then practice each stage of the interaction with familiar participants until comfortable and successful in appropriate behaviors.

c) Research base
i) Buchanan, L. (1990) pp 73-87

d) What to watch for with ELL/CLD students
i) Particular social groups and cultures have different expectations of adult and children when it comes to being accountable for task completion. This is a learned difference between cultures. The teacher needs to be aware that the expectations in an American school may need to be taught directly to CLD students and not just assumed to be understood.

ii) One way to introduce the idea of behavior and strategies specific to your classroom is to ask students about how their parents have them behave at home or learned playing games. This can then be expanded to the idea of acting appropriately in a classroom.

iii) Demonstrate all of the desired behaviors and strategies. Some role play may be helpful. Examples of bad behaviors may be used with caution.

**Guided practice in constructive quality interactions**

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Build awareness of appropriate school language and rules for academic and social behaviors
   iii) Develop confidence in school language and rules for academic and social interactions
   iv) Develop personal control of situations
   v) Reduce response fatigue

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
      At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

   iii) Peer or specialist demonstrates how to act or speak in a given school culture situation. The situation is explained in home and community language when possible, and each stage is modeled. Representatives of school language and rules who are familiar to the learners come into the classroom and role play the situation with the instructor. Students then practice each stage of the interaction with these familiar participants until comfortable with the interaction.

c) Research base
   i) Carrigan (2001) p 49

d) What to watch for with ELL/CLD students
   i) Learning to survive and thrive in a new environment is challenging for anyone. This can be especially difficult for ELL and CLD learners and their families as they learn to interact in a new language and with new social rules and expectations.

   ii) Bring in people from the community with whom the participants are comfortable first. Gradually expand the interaction circle as folks become more confident.

   iii) Small social support groups within school and within the community can provide a ‘safe’ group within which to ask questions and learn ways to succeed at tasks or in solving problems.

**Guided practice in cross-cultural conflict resolution strategies**

a) Purpose of the Strategy
i) Develop personal control of situations
ii) Enhance ability to resolve conflicts with others
iii) Facilitate the school adaptation process
iv) Reduce acting out behaviors
v) Reduce number of conflicts with other students

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
      At Tier 4, this strategy is done in specially designed individual programs and may be
      included in the IEP.
   iii) Peer or specialist demonstrates conflict resolution techniques in a given school
       culture situation. The situation is explained in home and community language when
       possible, and each step is modeled. Students then practice each step of the resolution
       with familiar participants until comfortable and successful in appropriate behaviors.

c) Research base

d) What to watch for with ELL/CLD students
   i) Particular social groups and cultures have different expectations of adult and children
      when it comes to conflict resolution. This is a learned difference between cultures.
      The teacher needs to be aware that the expectations in an American school may need
      to be taught directly to CLD students and not just assumed to be understood.
   ii) One way to introduce the idea of conflict resolution behavior and strategies specific
       to your classroom is to ask students about how their parents have them behave at
       home when they disagree with their siblings. This can then be expanded to the idea
       of acting appropriately in a classroom.
   iii) Demonstrate all of the desired behaviors and strategies. Some role play may be
       helpful. Examples of bad behaviors may be used with caution.

Guided practice w/ service personnel from school/government agencies

a) Purpose of the Strategy
   i) Improve confidence in official interactions
   ii) Strengthen school/parent partnerships
   iii) Reduce anxiety and stress
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be
       included in the IEP.
   iv) Peer or specialist demonstrates how to act in a given situation. The situation is
       explained in home and community language when possible, and each step is modeled.
       Parents may suggest situations with which they want assistance. Parents, students
and community members then practice each stage of the interaction, taking different roles each time until comfortable and successful in appropriate behaviors.

c) Research base
   i) Carrigan (2001) pp 54-58

d) What to watch for with ELL/CLD students
   i) Depending upon their particular history, parents and community members from particular cultures may have had very negative relationships with government agencies and representatives in their country or region of origin.
   ii) Personnel working with diverse families need extensive training in how to be most effective cross-culturally while at the same time sensitive to and responsive to the differences within specific speech communities.
   iii) Families and parents from diverse communities may need preparation and training in how to interact with government officials and representatives.
   iv) They may also need assistance in how to ask for assistance, how to request interpreters, how to access services, etc.

Guided reading & writing in home and community language

a) Purpose of the Strategy
   i) Improve motivation
   ii) Minimize behavior problems
   iii) Build transfer skills
   iv) Develop confidence in school language and rules for academic and social interactions
   v) Reduce code-switching
   vi) Develop cognitive academic language

b) How to do it
   i) At Tier 1, this strategy facilitates the transition of ELL/CLD students from their primary language base to bilingualism and helps with their interaction with all students in the general education classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Teacher directs advanced-fluency student to lead a guided reading or writing activity in the home and community language. Students can reread parts of a story in pairs after the directed reading activity rather than have one student read while the others all listen. Students then write their own summaries of what they have read. Writing can be in either home and community language or English. During this time the students have a chance to help each other. Advanced-fluency students can dramatize and create dialog to illustrate the action.
   vi) Expansion: Students can create dialogue and dramatize to illustrate the action of the story or passage.

c) Research base
v) Ross, D. (1971)
d) What to watch for with ELL/CLD students
   i) Not all ELL/CLD students are literate in their home or community language.
   ii) Picture dictionaries with bilingual words and definitions are usually the most practical reference to use with younger, less educated students.
Home activities

a) Purpose of the Strategy
   i) Develop cognitive academic language
   ii) Build transfer skills
   iii) Improve school/parent partnership
   iv) Develop content knowledge foundation

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) Teacher sends home specific content support activities for parents and students to do together. Parents are asked to read/work through the activities in both home and community language and English with their students.

c) Research base

d) What to watch for with ELL/CLD students
   i) Not all parents will be literate in their home language so you cannot just send materials home.
   ii) Parents will need to have the process explained and what is expected explained in the home language.
   iii) Some programs provide training to parents about how to read to their children and provide books in the home language to facilitate this process.
Individualizing

a) Purpose of the Strategy
   i) Design instruction so individual needs and abilities are addressed
b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) Learners are motivated and complete tasks appropriate to their needs, interests, and abilities. Individual Education Plan (IEP) may state that student will be able to use or respond to specific cues or reinforcements.
c) Research base
d) What to watch for with ELL/CLD students
   i) A basic premise of differentiation is that one type of instruction does not necessarily work for all students, i.e. one size does not fit all. Teachers are advised to begin where their students are, with their learning differences and their learning strengths.
   ii) For ELL and CLD students, instructional personnel are to build upon learners’ cultural and linguistic differences and strengths by developing instructional activities based on essential topics and concepts, significant processes and skills, and multiple ways to display learning while providing flexible approaches to content, instruction, and outcomes.

Information organization (EASY)

a) Purpose of the Strategy
   i) Organize and prioritize information by focusing on questions designed to identify important content
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Students can create cue cards to remember each step. Students follow steps while reading passages or thematic elements. The steps in EASY are:
      (a) Elicit questions (who, what, where, when, why)
      (b) Ask self which information is least difficult
      (c) Study easy content initially, followed by difficult
      (d) Yes! Provide self reinforcement through rewards or points for self
c) Research base

**d) What to watch for with ELL/CLD students**

i) Much like the other mnemonics provided in these strategy lists, ELL/CLD students need bilingual explanations of the teacher’s expectations and guided practice in implementing the steps in the strategy.

ii) Newcomers will need to have the EASY steps modeled and explained in their most proficient language before they can proceed independently.

iii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

**Interdisciplinary unit/Thematic Instruction**

a) **Purpose of the Strategy**
   
i) Build transfer skills
   
ii) Develop thinking and planning skills
   
iii) Facilitate connections between known and new
   
iv) Improve access to prior knowledge
   
v) Strengthen language development

b) **How to do it**
   
i) At Tier 1, this strategy is a way of organizing curricular elements which cuts across subject-matter lines to focus upon comprehensive life problems or broad areas of study that bring together the various segments of the curriculum into meaningful association.

ii) At Tier 2, this strategy is done with small groups.

iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.

iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

v) The teacher uses thematic, interdisciplinary teaching to help students connect what they learn from one subject to another, to discover relationships.

vi) Primary: Students plan a trip to the grocery store. They set up schedule, timing, measuring, counting, reading, identifying, describing, comparing, assessing, and budgeting activities in relation to their trip.

vii) Intermediate: Same trip to grocery store, but add spatial orientation, nutrition, and considerations of the quality of life.

viii) Secondary: Students study the social impact of a given scientific or technological development at the same time that they are becoming acquainted with the science or technology itself.

ix) Bondi (1988) recommends the following steps in designing interdisciplinary units:

   1. **Select a theme together.** Brainstorm together possible themes. Look for themes that relate to district/school goals and that interest students. Expand or narrow your theme as appropriate to reflect the teaching situation in which you are involved. Appoint a team leader for the duration of the development of the unit.

   2. **Work independently.** Identify topics, objectives and skills from within your subject area that could be developed within this unit.
(3) **Meet together to define objectives for the unit.** Share all topics, objectives and skills and combine them into a manageable package.

(4) **Meet together or select activities.** Match these activities to your goals in individual subjects. Stretch a little, if need be. Look for activities that provide student options and exploratory activities.

(5) **Brainstorm resources.** Consider here both material resources and people resources.

(6) **Develop your activities** (individually and collectively). Divide up the responsibility among the team to order, collect and contact.

(7) **Schedule your unit.** This includes setting the dates for when to teach it, but also scheduling the use of rooms, speakers, etc.

(8) **Advertise your unit.** Do whatever you can to excite student and parent interest in the unit. Advertise in the school newsletter. Put up a "Coming Attraction" bulletin board. Wear slogans on your lapel.

(9) **Implement your unit.** Have fun and don't expect everything to be perfect.

c) **Research base**
   ii) Bondi (1988)

d) **What to watch for with ELL/CLD students**
   i) This is an excellent strategy for making content relevant to the lives of diverse learners. Be sure to include real activities related to the specific communities that your students come from.
   ii) For newcomers and beginning level ELL students the teacher should assign a bilingual peer helper or partner as the unit is explained.
Language games

a) Purpose of the Strategy
   i) Develop cognitive academic language
   ii) Develop basic interpersonal communication
   iii) Build transfer skills
   iv) Develop content knowledge foundation

b) How to do it
   i) At Tier 1, this strategy can be done in the general education classroom with all
      students participating. Students may play in groups with culture and language peers
      at first and then mixed groups of diverse students as they become comfortable with
      the games activities.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be
      included in the IEP.
   v) Students play language games that reinforce specific content. The games are
      structured to reinforce and elaborate on content knowledge while developing home
      and community language and English language skills including turn taking, asking
      questions, giving appropriate responses, giving directions, and other game,
      communication and interaction skills.
   vi) Examples of game structures are memory games like “Concentration”, rummy games
      such as “Go Fish”, and matching games such as “Old Maid”.
   vii) The content topics of the games can be chosen and developed to match a specific
        topic or lesson in the classroom and to reinforce the vocabulary words of that lesson.
        Some examples might be: terms from the rainforest, historical events, types of
        animals, mathematical equations, visits to community locations, workers in the
        community, etc.
   viii) These are also useful in illustrating second language learning strategies. All of the
        three basic games, SETS, PAIRS, and MEMORY, can be played to reinforce
        receptive and expressive language, visual and auditory memory, or content literacy.
   ix) The games can be played periodically during the school year to provide a review of
        foundation concepts when making a transition to a new topic or subject matter. The
        cards may also be used individually as flashcards to review the vocabulary words, and
        language content.
   x) The games may be used as an alternate assessment process. By watching the students
      play the card games, especially when a lot of expressive and receptive language is
      required, the teacher will be able to observe the extent to which individual students
      have acquired the learning concepts and content or how well they have retained
      previously presented information.
   xi) All of the games can be played to reinforce receptive and expressive language, visual
       and auditory memory, or content literacy. If students are non-verbal, the games can
       be played through cognitive visual matching. If students do not speak English or are
       limited English proficient, the games can be played in their native language or
bilingually. They can play using as much English as they have acquired, and finally wholly in English.

Example game: WEATHER game may be used in versatile ways to supplement content lessons at any grade level. It is best used as a review, reinforcement or assessment tool. There are three basic games which can be played with these cards: Sets, Pairs, and Memory. Each of the three basic games can be varied according to specific lesson objectives. The Cards in WEATHER consist of 9 sets of four cards per set illustrating common weather conditions in English. These are the weather words most often used in calendar activities in the classroom.

1) Players: Two to six in each group playing.
2) Object: To collect the most sets of four of a kind.
3) Deal: Cards are dealt one at a time. Each player receives five cards. The rest of the pack is placed face down in the center of the table to form the 'draw' pile.
4) Play: Have the students choose the first player by names alphabetically, ages, or other device. Starting with the first player, each player calls another by name and requests cards of a specific type, as: “David, do you have any sunny days?” The player asking must hold at least one of the types of card requested. The player asked must give up the card requested, saying: “Yes, Kala, I have a sunny day.” Another variation of this is to have the player ask for a category first. If Kala successfully identifies the picture, "cloudy day", then she gets the card. The player asked does not have to say she has more of the set of cards if she has more than one of the same set of cards. The player requesting has to ask for each individual card. E.g. “David, do you have another cloudy day?”
5) If the player asked does not have any cards of the type requested, then she says "Draw!" and the asker draws the top card from the draw pile. A player's turn to ask continues so long as she is successful in getting the cards requested. If he is told to draw and happens to draw a card of the type requested, the player may show this card, name it, and continue the turn. As soon as any player gets a set of all four cards of one type, they must show them and give the names of the cards out loud, placing them on the table in front of him or her. If played competitively, the player who collects the most sets by the end of the game wins.

c) Research base
   i) Law & Eckes (2000) pp 204-206

d) What to watch for with ELL/CLD students
   i) Be sure to establish consistent game playing rules and phrases that all students are to use when playing the game. At first, these can be as simple as “Do you have an xxx?” “Is this an xxx?” Here are xxx”.
   ii) The phrases can become more complex and more ‘natural’ as students become more comfortable playing the games.

Learning centers or stations

a) Purpose of the Strategy
i) Build confidence in independent work
ii) Reinforce content lessons
iii) Improve access to prior knowledge
iv) Expand comprehension
v) Facilitate individualization

b) How to do it
i) At Tier 1 this strategy is part of the general education classroom and worked into the layout of the classroom with use of furniture and other means of demarking specific learning areas.
ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
v) Teacher creates areas or locations in the classroom where students work on various tasks simultaneously.
vi) These areas can be formal or informal and can be distinguished by signs, symbols, or colors. Centers differ from stations in that centers are distinct content locations while stations work in concert with one another. For example, there may be a science center, math center, writing center and reading center in the classroom; each with its special furniture, equipment, materials, etc. Assignments or tasks specific to each center or station activity are either handed out ahead of time or available at each location.
vii) For example, create a literacy center where different activities exist for practicing commonly-used sight words, reading vocabulary words and spelling words.
viii) An additional example for a geography unit: designate a learning center where materials and activities are available for individual or group use. Different activities could include: a map of the United States with tracing paper and colored pencils, as well as a map, a puzzle, and, if possible, a computer game that supports the content (such as *Oregon Trail*). Students should be given the choice of working alone or in a small group.

c) Research base
i) Tomlinson (1999)

d) What to watch for with ELL/CLD students
i) ELL/CLD students should not go to separate learning centers for primary instruction in a content lesson or task. They need direct instruction in the content or task including key vocabulary and guided practice in what is expected of them at each learning center.
ii) After the ELL/CLD students have been prepared for the learning centers and shown how to use the materials or equipment at each center, they can join in the activities at each center just as the rest of the class does.
iii) Learning centers are a good way to reinforce content knowledge and allow students to become engaged in applications of this new knowledge.

---

**Learning styles (Entry points)**
a) Purpose of the Strategy
   i) Build awareness of learning process
   ii) Develop extended time on-task
   iii) Develop personal control of situations
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher adapts lesson to students’ varied intelligence preferences or strengths (Gardner 1993). A student who is strong spatially may take in information, solve problems, and express learning differently than a student whose strength is verbal-linguistic. Teachers can facilitate the learning process by considering these differences when planning and carrying out instructions.
c) Research base
   i) Tomlinson (1999) pp 81-83
d) What to watch for with ELL/CLD students

Leveled activities
a) Purpose of the Strategy
   i) Build awareness of learning process
   ii) Develop extended time on-task
   iii) Develop personal control of situations
   iv) Improve retention
   v) Develop higher tolerance
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher ensures that students with different learning needs work with the same essential ideas and use the same key skills. For example, a student having difficulty with reading still needs to make sense of the basic concepts and ideas of a story. Simultaneously, a student who is advanced in the same subject needs to find genuine challenge in working with these same concepts and ideas. Tiered activities are used so all students focus on essential understandings and skills but at different levels of complexity, abstractness, and open-endedness. This is done by keeping the focus of activity the same but providing routes of access at varying degrees of difficulty.
c) Research base
   i) Tomlinson (1999) pp 83-87
   ii) Heacox (2002) pp 91-100
d) What to watch for with ELL/CLD students
   i) The key to integrating instruction in mixed skill classrooms, typical of Tier 2, is the creation of or access to leveled reading, writing, or content materials. Several publishers have excellent leveled materials which can be used as models.
ii) An example is books about the ecosystem within a pond. All illustrations are the same and all content is the same, but the reading level of the content in the booklets varies for the ability level of the students, e.g. level 1, level 2, level 3, etc. depending upon the classroom needs.

iii) For example, National Geographic publishes magazines that are coded in the upper left corner of the cover for beginner, middle, and advanced readers. They also have topic specific books coded on the back of the cover for levels with one spot, two spots, three spots, or four spots.

Listening comprehension (TQLR)

a) Purpose of the Strategy
   i) Build awareness of learning
   ii) Develop personal control of situations
   iii) Improve access to prior knowledge
   iv) Strengthen language development

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iii) This strategy assists with listening comprehension. Students generate questions and listen for specific statements related to those questions. The steps in TQLR are:
   1) Tuning in
   2) Questioning
   3) Listening
   4) Reviewing

c) Research base
   i) Popp, M.S. (1997)
   vi) Robinson, F. P. (1946)

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the TQLR steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.
**Manipulatives**

a) Purpose of the Strategy
b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) Teacher uses multiple representations, materials, and other hands-on resources to illustrate mathematical ideas. These can be cans, cubes, rods, coins, bottle caps, etc.

c) Research base

d) What to watch for with ELL/CLD students

**Marking text**

a) Purpose of the Strategy
   i) Also called coding text (Davey, 1983), students mark their text as a way to stay engaged in their reading.

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) They use codes to indicate the type of thinking they are to use with particular passages. For example, if you want the students to make connections between their lives and the text, they might mark those passages with “REM” for “remember when”. Students can also put “?” marks where they have questions about the text.

(c) Research base

d) What to watch for with ELL/CLD students
   i) This is an easy strategy to assist students who are beginning to do more reading to organize and think about what they are reading.
   ii) This can be done in any language in which the students are literate.

**Math word problem strategy (SQRQCQ)**

a) Purpose of the Strategy
   i) Improve comprehension
   ii) Improve retention of information
   iii) Improve problem solving of math word problems
   iv) Strengthen language development

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iv) This strategy provides a systematic structure for identifying the question being asked in a math word problem, computing the response, and ensuring that the question in the problem was answered. The steps in SQRQCQ are:
   1) Survey word problems
   2) Question asked is identified
   3) Read more carefully
   4) Question process required to solve problem
   5) Compute the answer
   6) Question self to ensure that the answer solves the problem

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the SQRQCQ steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Mediated stimuli in classroom

a) Purpose of the Strategy
   i) Enhance ability of student to focus on learning
   ii) Facilitate discussion about new learning
   iii) Reduce distractibility
   iv) Reduce resistance to change

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher always previews new content, new materials, new sounds and any new activity with the students. Peers provide home and community language explanations.

c) Research base
   i) Feuerstein, R. (1986)

d) What to watch for with ELL/CLD students
   i) Newcomers may become overly stimulated by lots of bright, new, unfamiliar, strange objects, signs, sounds, and miscellany within their new classroom. They do not know what is important to attend to and what is not important. It is all new and exciting.
   ii) This is also going to impact students with undiagnosed neurological conditions that they have not yet learned to accommodate.
iii) Better to start out with less and add as students become comfortable and familiar with what is in the classroom

**Modeling**

a) Purpose of the Strategy  
   i) Reduce code-switching  
   ii) Develop cognitive academic language  
   iii) Build transfer skills  
   iv) Develop content knowledge foundation

b) How to do it  
   i) At Tier 2, this strategy is done with small groups.   
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.   
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.  
   iv) Teacher models academic responses and expectations. The situation is explained in home and community language when possible, and each response and expectation is modeled. Students then practice each response and interaction until comfortable and successful.

c) Research base  
   i) Tovani (2000) has a good discussion about the importance of modeling on pp 33-34.  

d) What to watch for with ELL/CLD students  
   i) Remember that some ELL and CLD students have had very little experience with school or with being with people outside of their own family or culture. They may not know what action you are modeling if it is something they have never experienced or seen.  
   ii) The desired action and response need to be explained in the students’ most proficient language.
Oral discussions

a) Purpose of the Strategy
   i) Reduce code-switching
   ii) Develop cognitive academic language
   iii) Develop basic interpersonal communication
   iv) Build transfer skills
   v) Develop confidence in school language and rules for academic and social interactions

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Target students are given opportunities to discuss all aspects of content lessons and to prepare for assessment situations. They are encouraged to hold discussions in both home and community language and English whenever they need to clarify content or directions. Specific homogeneous and heterogeneous discussion groups may be established and used alternately in varied content-focused activities.

c) Research base

d) What to watch for with ELL/CLD students
   i) Some teachers are threatened or concerned about students speaking to each other when they do not understand what they are saying. To assure teachers that the students are indeed on task, the teacher can always have these oral discussions focus upon specific tasks, with worksheets or other task production involved that they can see is being attended to.
   ii) The teacher can also have bilingual student monitors report on what was discussed after these activities.

Organization

a) Purpose of the Strategy
   i) Develop analytical skills
   ii) Develop association skills
   iii) Develop categorization skills
   iv) Develop field independent skills
   v) Improve mnemonic retrieval

b) How to do it
   i) At Tier 1, this strategy is done in the general education classroom with all students participating. The teacher may assign students of similar language and ability to either heterogeneous or homogeneous groups depending upon her specific goals.
   ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.

iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

v) Teacher directs students to empty out their back packs and work in small groups.
   Each small group goes through their steps, sorting all the items in their piles together. They make lists of their groups of items to share with the class. Steps for students to follow in implementing this strategy:
   (1) What elements go together and why?
   (2) What do I call these groups?
   (3) Can I remember the elements by the group?
   (4) How can I generalize this information?

vi) When applying the Organization strategy, students work through problems or tasks using the above sequence of self-monitoring questions. For example, you are going to have a new unit about rocks and minerals, i.e. igneous, sedimentary, conglomerate, etc. Many of your students are unfamiliar with these ways of grouping natural materials that they consider generically as Rocks. One group of students comes from a culture where rocks are grouped by hard vs. soft, another from a culture that groups rocks by whether they can be used to produce something in the home. You might introduce your class to the lesson by having actual examples of the rocks to be studied present to handle or take the class on a field trip to the museum or a local mine or industrial area to observe them. You could also show pictures or videos of chemists interacting with the materials. Have the students look for patterns in appearance, use, environment, chemical reactions, etc. They could chart the attributes and characteristics of the rocks and minerals on a graph or in Venn diagrams (step 1 of Organization, “What elements go together?”). Now they should look for distinctive patterns of commonality between rocks and minerals that shows whether or not they go together (step 2 of Organization, “What attribute of these am I using to group them?”). Ask the students what they would name the group of rocks and minerals based upon the major attributes. Now introduce them to the common English name of the group (step 3 of Organization, “What name do I give to each group?”). Discuss how the materials within each group share certain common characteristics, and then discuss the characteristics that all rocks and minerals share in common as rocks and minerals (step 4 of Organization, “How are the groups similar to one another?”). Discuss how the rocks within each group might differ from each other, how each group of rocks and minerals differ from the other groups and how rocks differ from non-rocks (Step 5 of Organization, “How are the groups different from one another?”). Finish the unit with a discussion of how to find patterns in anything you are studying (step 6 of Organization, “What organization patterns do I see?”).

vii) You might now step back from the lesson and discuss the Enhanced cognitive learning that you have provided students, the learning to learn lesson that is represented by the strategy you had them use. At this point you would discuss how everything in the world is composed of various elements that need to be identified in order to understand the whole thing being studied (field independence) and that when all the parts are put together the meaning of the whole thing results (field sensitive).

c) Research base
d) What to watch for with ELL/CLD students
   i) The strategy preparation can be done in the native language or dialect of the students to assure their understanding of your expectations and their task prior to carrying the assignment out in English or other communication mode.
   ii) Understand that all cultures have different ways of thinking of common attributes a group of similar objects. What constitutes the criteria to pay attention to will vary based upon cultural values and learning practices. While it seems obvious to one group that the predominant surface color of a set of objects is what links them together as a set of objects, to another group it might be that surface texture or size is more important as an attribute for sorting out similarity and difference.
Paraphrasing (RAP)

a) Purpose of the Strategy
   i) Reading comprehension technique for improved retention of information
   ii) Assist students to learn information through paraphrasing

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) This strategy assists students to learn information through paraphrasing. The steps in RAP are:
      1) Read paragraph
      2) Ask self the main idea and two supporting details
      3) Put main idea and details into own words

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the RAP steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Partners

a) Purpose of the Strategy
   i) Improve motivation
   ii) Minimize behavior problems

b) How to do it
   i) At Tier 1, this strategy is done by pairing up all the students in the general education classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) With paired oral reading, each student participates either as an interested listener or as reader, while the teacher can move from pair to pair listening. Reading can be varied by changing partners. Children can reread parts of a story in pairs after the directed reading activity rather than have one student read while the others all listen. During this time, the students have a chance to help each other.
vi) With science and math lessons, different partners may be used matching a successful learning with one just slightly less successful and so on down the line. Problem solution can be revisited by changing partners and redoing the problem and solution.

c) Research base

d) What to watch for with ELL/CLD students
ii) Partners must be selected carefully with specific objectives in mind. If competence and understanding of the content is the goal, then similar language skills are necessary.
iii) If expansion and transition of learning is the goal, then paring a less proficient with a more proficient bilingual partner will help.
iv) If challenging application is the goal, then paring very differently skilled parties may work.

Peer / school adaptation process support

a) Purpose of the Strategy
i) Build awareness of adaptation process
ii) Strengthen ability to discuss what is happening
iii) Reduce anxiety and stress

b) How to do it
i) At Tier 1, this strategy is most effective where there are more than a few diverse learners at each grade level and where some of these students have been in the school for more than a year or two.
ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
v) Primary level: successful older students in the upper grades assist younger students around the school building and during lunch and play times. This can be used in conjunction with and as a supplement to a peer buddy system within individual classrooms.
vi) Intermediate level: this strategy works well with facilitating adaptation and communication. A peer support group is established and given time to meet regularly. The support group discusses their experiences with school adaptation and how they are dealing with culture shock. Successful students from secondary level may assist as peer support models.
vii) Secondary level: this strategy works well with facilitating adaptation and communication and also may assist as students prepare to transition out of school into the work environment. A peer support group is established and given time to meet regularly. The peer support group discusses their experiences with school adaptation
Personal timelines

a) Purpose of the Strategy
   i) Develop self esteem
   ii) Encourage pride in student’s personal history
   iii) Build transfer skills
   iv) Facilitate discussion about new learning
   v) Strengthen school/parent partnerships

b) How to do it
   i) At Tier 1, this strategy is done in general education and integrated classrooms where all students participate in the activity.
   ii) At Tier 2, this strategy is done with small groups
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The teacher selects the events or length of time to cover, e.g. two years, five years, or such as appropriate to the age and developmental level of the students. The teacher gives the students an event in time or a length of time as a framework. The students research and then tell about their personal or family history during this event or length of time. Students may create booklets about their memories, their families, etc.
   vi) Students make their own life time line and illustrate their life’s history to the present. They should be encouraged to see their lives as stories that can be told to others.

c) Research base
   i) Carrigan (2001) p 50

d) What to watch for with ELL/CLD students
   i) Students may be reluctant to describe or discuss what happened to their family during this time period or specific event. Very difficult or painful things may have occurred for this student or family.
ii) The teacher must be prepared to deal with sensitive information should it arise and also to know when not to push further for information. Only elicit information that the student is comfortable sharing at that particular point in time.

iii) Students may share more as they become more comfortable in the classroom or more trusting that the information will not be used against them or their family.

Planned ignoring

a) Purpose of the Strategy
   i) Reduce confrontations over minor misbehaving
   ii) Eliminate inappropriate behavior after a few moments

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iv) Purposely ignores certain behaviors exhibited by students.

v) For example, teacher elects to ignore some whispering between two students during independent work-time.

c) Research base

d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students may have limited experience with attending schools and not know what the rules are within classrooms.

   ii) In some cultures, a student who understands some task is expected to assist his relative or friend with a task who may not be doing so well, so some quiet helping should be allowed as long as it appears to be on task.

Planned movement

a) Purpose of the Strategy
   i) Prevent inappropriate moving around the room
   ii) Minimize behavior problems in the classroom

b) How to do it
   i) At Tier 1, this strategy is done with the entire classroom.
   ii) At Tier 2, this strategy is done with small groups.

   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

   v) Periodically provide students opportunities to move about the classroom for appropriate reasons.

   vi) For example, teacher allows students to move to a learning center or study booth for part of their independent work-time instead of remaining seated at their desks for the entire period.
c) Research base

d) What to watch for with ELL/CLD students
   i) Differences in mobility and movement by children are learned differences among cultures and social groups. In some families children are expected to get up and move around whenever they want to, in others children are expected to remain seated or in one place unless and until they are given permission to move elsewhere.
   ii) Some children may have undiagnosed conditions that inhibit their sitting or standing in one place without moving occasionally. Using planned movement and making accommodations for opportunities for students to move facilitates learning for all students.

Positive reinforcement

a) Purpose of the Strategy
   i) Increase the frequency of appropriate responses or behaviors
   ii) Facilitate students’ comfort with learning environment

b) How to do it
   i) At Tier 1, this strategy is used by the teacher at all times with all students in the classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The teacher provides feedback or rewards for completing appropriate tasks or behaving in appropriate ways.
   vi) For example, teacher provides a student extra free time when his/her math or reading assignment has been completed.

c) Research base
   i) Opitz (1998) p 61

d) What to watch for with ELL/CLD students
   i) What is rewarding to one person is not necessarily rewarding to another. This is another learned preference.
   ii) The teacher should use a variety of affirmatives, words and phrases to denote reinforcement.
   iii) When using physical rewards, always do some research to identify culturally, developmentally and gender appropriate items.
   iv) When using extra time or a special activity as a reward, vary these depending upon the students’ interests.
Presentation modification

a) Purpose of the Strategy
   i) Expand and elaborate on learning foundation
   ii) Build transfer skills

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) Use concrete learning activities and simplified language to accommodate students’ current conceptual/linguistic development. Students are systematically introduced to abstract concepts (academic language). Supplement the abstract concepts with visual aids, manipulatives, examples from students’ previous experiences, or other direct hands-on experiences.

c) Research base

d) What to watch for with ELL/CLD students

Prior knowledge

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Develop cognitive academic language
   iii) Develop content knowledge foundation
   iv) Facilitate analogy strategies

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) Teacher presents lessons with concrete reference to specific experiences in which students have participated in the past, such as field trips or other shared experiences; may also be in reference to prior life experiences of students. Community members may make presentations about events significant to students’ families. Teacher can plan content lessons in relation to these experiences.

c) Research base
   i) Harwell (2001) pp 289-293

d) What to watch for with ELL/CLD students

Prompting

a) Purpose of the Strategy
   i) Develop higher tolerance
   ii) Develop personal control of situations
   iii) Increase students’ probability of generating a correct response.
   iv) Utilize prior knowledge

b) How to do it
i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iii) Provide students with clues or prompts as they complete a task, e.g., underline one letter of a pair of letters that a student is studying. Focus attention on characteristics of both letters to reduce confusion.

c) Research base

d) What to watch for with ELL/CLD students
   i) All cultures have guidelines about how help you should give to a child or another person. Prompting is a kind of ‘helping’.
   ii) These are mostly unspoken and learned through being raised in the culture and community.
   iii) Find someone in the cultural community who can brief you about what is acceptable or expected regarding supporting and helping learners. It may well be that you are expected to help a great deal more than you think is appropriate. This will be your own cue that your students will need a lot of guidance in how to use prompts appropriately.

Proof reading (COPS)

a) Purpose of the Strategy
   i) This strategy provides a structure for proofreading written work prior to submitting it to the teacher.

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) The steps in COPS are:
      1) Capitalization correct
      2) Omissions
      3) Punctuation correct
      4) Spelling correct

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the COPS steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Proximity (Proximics)

a) Purpose of the Strategy
i) Increase students’ time on-task
ii) Reassure frustrated students

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher and/or other students are strategically positioned to provide support and to prevent or minimize misbehaviors.
   v) For example, teacher circulates throughout the classroom during group or independent activities, spending more time next to particular students.

c) Research base

d) What to watch for with ELL/CLD students
   i) All cultures have guidelines about how close or how far away to stand or sit next to another person. These are mostly unspoken and learned through being raised in the culture and community where the proximity to another person is seen and remarked upon by those around you.
   ii) These space relations are also affected by whether someone is standing over or sitting under another person. These relative positions convey power and control relationships which vary from culture to culture.
   iii) The teacher must familiarize herself with the proximity ‘rules’ of the various cultures represented in her classroom before expecting to use proximics strategically to promote learning.
Reading comprehension - PQ4R

a) Purpose of the Strategy
   i) Improve reading comprehension
   ii) Improve access to prior knowledge
   iii) Expand and elaborate on learning foundation
   iv) Build transfer skills

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) PQ4R may assist students to become more discriminating readers and retain more of what they are reading.
   iv) The steps in PQ4R are:
       (1) Preview
       (2) Question
       (3) Read
       (4) Reflect
       (5) Recite
       (6) Review

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the PQ4R steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Reading comprehension strategy - SQ3R

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Expand and elaborate on learning foundations
   iii) Improve access to prior knowledge
   iv) Improve comprehension
   v) Strengthen language development

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
iv) This strategy reminds students to go through any passage or lesson carefully and thoughtfully. Students can make cue cards to remember each step. The steps in SQ3R are:
   (1) Survey
   (2) Question
   (3) Read
   (4) Recite
   (5) Review

c) Research base
   iii) Tovani (2000)
   ix) Robinson, F. P. (1946)

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the SQ3R steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Reading strategy (FIST)

a) Purpose of the Strategy
   i) Assist students to actively pursue responses to questions related directly to materials being read
   ii) Improve reading comprehension

b) How to do it
   i) At Tier 1, this strategy is done within the general education classroom with mixed groups of students. The FIST analysis strategy framework provides a structure for understanding reading and building reading comprehension.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Students follow the steps in the FIST strategy while reading paragraphs in assigned readings. To help the students remember the steps, the teacher can provide a checklist of the steps with the letters F, I, S, T down the side and their meaning under each letter.
   vi) The steps in FIST are:
(1) First sentence is read  
(2) Indicate a question based on first sentence  
(3) Search for the answer to the question  
(4) Tie question and answer together through paraphrasing

c) Research base  
  (1) Allington & Cunningham (2002)  
  vi) Moore, Alvermann, & Hinchman (2000)

d) What to watch for with ELL/CLD students  
  i) Newcomers will need to have the FIST steps modeled and explained in their most proficient language before they can proceed independently.  
  ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Retention strategy (CAN DO)

a) Purpose of the Strategy 
   i) Develop higher tolerance  
   ii) Develop thinking and planning skills  
   iii) Improve mnemonic retrieval  
   iv) Improve retention  
   v) Utilize prior knowledge  

b) How to do it 
   i) At Tier 2, this strategy is done with small groups.  
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.  
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.  

   iv) This visualization technique may assist with memorization of lists of items. The steps in CAN-DO are:  
       (1) Create list of items to learn  
       (2) Ask self if list is complete  
       (3) Note details and main ideas  
       (4) Describe components and their relationships  
       (5) Over-learn main items followed by learning details

c) Research base 

d) What to watch for with ELL/CLD students 
   i) Newcomers will need to have the CAN-DO steps modeled and explained in their most proficient language before they can proceed independently.
vi) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

**Retention strategy – PARS**

a) Purpose of the Strategy
   i) Retention of content.

b) How to do it
   i) At Tier 1, this strategy is done within the general education classroom with mixed groups of students. The PARS retention strategy framework provides a structure for understanding what is being learned and retaining the information for later application.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) PARS is recommended for use with younger students and with those who have limited experiences with study strategies. Students can create cue cards or use posters to remind themselves of the steps.
   vi) The steps in PARS are:
       (1) Preview
       (2) Ask questions
       (3) Read
       (4) Summarize

c) Research base
   ii) Lee, S. W., (Ed.) (2005)

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the PARS steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

**Reading strategies - RIDER**

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Expand and elaborate on learning foundation
   iii) Improve access to prior knowledge
   iv) Improve retention of information
   v) Improve reading comprehension
   vi) Strengthen language development

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
ii) This visualization strategy cues the learner to form a mental image of what was read and assists the student in making connections with previously learned materials. The steps in RIDER are:
   (1) Read a sentence
   (2) Image (form a mental picture)
   (3) Describe how new information differs from previous
   (4) Evaluate image to ensure it is comprehensive
   (5) Repeat process with subsequent sentences

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the RIDER steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Reality-based learning approaches

a) Purpose of the Strategy
   i) Build awareness of learning
   ii) Reduce confusion in locus of control
   iii) Reduce off-task behaviors
   iv) Improve motivation

b) How to do it
   i) At Tier 1, this strategy is done in general education and integrated classrooms where all students participate in the activities.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) Teachers provide students with real purposes and real audiences for reading, writing, and speaking.
   vi) The teacher provides students with real audiences and real application situations for presenting mathematical and scientific hypotheses or calculations.
   vii) When students write and speak to intended purposes and audiences, they are more likely to be motivated and to obtain valuable feedback on their efforts.

c) Research base

d) What to watch for with ELL/CLD students
   i) In some societies and cultures, children are actively discouraged from speculation and make believe and are encouraged to stay focused on real life and real objects and real interactions.
   ii) It is not always apparent when your students come from homes where make believe and fantasy are not supported. Always introducing new content by giving real examples and real applications will assist students in accessing and comprehending the content of the lesson.
vii) The teacher can begin introducing make believe examples and applications as students become comfortable with the general learning process. Teachers should always make it clear when something is nonfiction and when something is fiction.

**Reduced stimuli**

a) Purpose of the Strategy
   i) Enhance ability of students to focus on learning
   ii) Encourage questioning and exploration of new learning
   iii) Reduce response fatigue
   iv) Reduce culture shock
   v) Develop personal control of situations

b) How to do it
   i) At Tier 1, this strategy is done at the beginning of the school year and possibly at the beginning of each semester depending on the time of year new students seem to enroll.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The teacher starts the classroom with relatively blank walls and empty spaces, also monitoring the use of music and other auditory materials.
   vi) Teacher does not display or use visual / auditory materials until students have been introduced to the content or have produced the materials themselves.

(1) Visual, tactile, and auditory experiences are introduced gradually and with demonstration.

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers may become overly stimulated by lots of bright, new, unfamiliar, strange objects, signs, sounds, and miscellany within their new classroom. They do not know what is important to attend to and what is not important. It is all new and exciting.
   ii) This is also going to impact students with undiagnosed neurological conditions that they have not yet learned to accommodate.
   iii) Better to start out with less and add as students become comfortable and familiar with what is in the classroom.

**Reciprocal questioning**

a) Purpose of the Strategy
   i) Improve reading comprehension
   ii) Use discourse techniques
   iii) Sometimes used as an inquiry approach
   iv) Improve mnemonic retrieval
   v) Improve retention
vi) Develop thinking and planning skills

b) How to do it
i) At Tier 1, this strategy is done within the integrated classroom in any content area.
ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
v) Reciprocal Questioning: Teacher and student ask each other questions about a selection. Student modeling of teacher questions and teacher feedback are emphasized as the learner explores the meaning of the reading material.

c) Research base

Rest and relaxation techniques

a) Purpose of the Strategy
i) Enhance ability of students to learn new things
ii) Develop self-monitoring skills
iii) Reduce anxiety and stress responses
iv) Reduce culture shock side effects

b) How to do it
i) At Tier 2, this strategy is done with small groups.
ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
iv) Relaxation techniques are shown in video or demonstration form with an explanation in home and community language when possible. Students discuss when they might need to use these techniques.

c) Research base

d) What to watch for with ELL/CLD students
i) Heightened anxiety, distractibility, and response fatigue are all common side effects of the acculturation process and attributes of culture shock.
ii) ELL and CLD students need more time to process classroom activities and tasks. Building in rest periods will provide thinking and processing breaks in their day.

Role-playing

a) Purpose of the Strategy
i) Build awareness of appropriate cognitive academic language
ii) Build awareness of appropriate communication behaviors for school language and rules
iii) Build transfer skills
iv) Develop cognitive academic language
v) Develop confidence in school language
vi) Develop higher tolerance
vii) Develop personal control of situations
viii) Develop thinking and planning skills
ix) Improve retention of content
x) Reduce code-switching
xi) Reduce distractibility
xii) Reduce response fatigue
xiii) Utilize prior knowledge

b) How to do it
i) At Tier 2, this strategy is done with small groups.
ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
iv) Students identify a number of uncomfortable or uncertain social or formal interactions. Teacher and assistant model the appropriate and inappropriate ways to handle these interactions. Students take different roles in the interaction and practice with each other and the teacher. Students read dialog prepared by the teacher or by other students.
v) Teachers and assistants model the appropriate and inappropriate ways to use cognitive academic language and cognitive learning strategies. Students take different roles in the interactions and practice these with each other and the teacher. Students practice the cognitive learning strategies in varied academic content areas with the teacher or assistant monitoring.
vi) Teacher and assistant model the appropriate and inappropriate ways to use basic interpersonal communication and cognitive academic language in various school settings, both in and out of the classroom. Students take different roles in the interactions and practice these with each other and with the teacher. Students may suggest communication situations they want specific assistance with and teacher facilitates role-plays. Students create dialogs and interaction situations to enact.
vii) Assign students specific roles and create situations where roles are acted out based upon how the students believe their characters would act. A specific problem, such as discrimination, is identified and described. Students role-play how they would confront the problem and discuss their roles or behaviors upon completion. Students learn how to confront the reactions of others and ways to deal with situations similar to the role-play.

c) Research base
i) Collier (2003) pp 183

d) What to watch for with ELL/CLD students
   i) Many societies and cultures have specific beliefs and understandings about pretending to be something one is not in reality; there are cultural guidelines for “make believe”, “play”, and assuming the role or character of someone or something.
   ii) Be clear that in public schools and classrooms we sometimes are like actors in movies or television stories (although understanding that some people may think those are all real) for the purpose of illustrating or demonstrating something.
   iii) Be clear that they will not become the character or thing and that it is a temporary action to illustrate or demonstrate a particular interaction you want them to learn.
   iv) It may be easier with some students to start with puppets or drawings and then work up to individual people doing the actions.
Scaffolding

a) Purpose of the Strategy
   i) Scaffolding is a way to support, elaborate and expand upon students’ language as they learn to read (and write).
   ii) Scaffolds are temporary frameworks that offer students immediate access to the meanings and pleasure of print.

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) For example, one scaffolding strategy is paired reading. The teacher has students sit in pairs with one copy of the same book between them. All students are to read along during the activity, but only those students who the teacher taps or stands behind are to read aloud. The teacher may move around the room in a random manner, tapping or standing behind different pairs of students. When he/she taps the new pair, they start reading wherever the previous pair stopped reading. The voices may overlap slightly. The same story may then be read by groups of various sizes in the same manner.
   v) Another scaffolding technique is to have various students holding puppets or models representing characters or passages in the reading and when the person or persons reading get to that passage, the puppets or pictures representative of that passage are held up for all to see. Sentence level scaffolds and discourse scaffolds (such as story mapping) are further examples of supporting language and reading.

c) Research base
   i) Opitz (1998) pp150-157,
   ii) Vygotsky 1962

d) What to watch for with ELL/CLD students
   i) Teachers will need to lay a foundation for learning and continue to support new learners through the process until they are ready to go on their own.
   ii) It is important to remember not to continue extensive scaffolding beyond the point of skill acquisition. The learner must become empowered to proceed on her own.
   iii) Vygotsky discusses this in the context of the zone of proximal development.

Self-monitoring techniques

a) Purpose of the Strategy
   i) Develop confidence in cognitive academic interactions
   ii) Develop independence in learning situations
   iii) Develop personal control of situations
   iv) Increase time on-task
   v) Facilitate student assuming responsibility for learning
   vi) Reduce response fatigue
   vii) Reduce inappropriate behaviors
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Individual students monitor their own learning behaviors using teacher or student-made checklists. For example, students record a checkmark each time they catch themselves being distracted or each time they catch themselves tapping their pencils on their desks, or each time they complete a specified portion of an assignment.

c) Research base
   i) Borba (2001) pp 81-118,
   ii) Strickland, Ganske, & Monroe (2002) p 216
   iii) Tomlinson (1999) pp 66-68

d) What to watch for with ELL/CLD students
   i) All cultures have expectations and ‘rules’ about the degree to which a child is responsible for their actions. This is related to differences in cultural practices regarding locus of control.
   ii) Students can learn this strategy and benefit from it but the teacher has to directly teach this process and not assume students automatically know about the purpose.
   iii) Use the students’ most proficient language to explain what the process and purpose of the strategy.
   iv) The teacher must familiarize herself with the self control ‘rules’ of the various cultures represented in her classroom before expecting to use self monitoring strategically to promote learning.

Self-reinforcement

a) Purpose of the Strategy
   i) Build awareness of learning
   ii) Develop personal control of situations
   iii) Develop thinking and planning skills
   iv) Facilitate access of prior knowledge
   v) Facilitate language development
   vi) Improve motivation and response
   vii) Reduce off-task behaviors

b) How to do it
   i) At Tier 1, this strategy is done with all of the students in the integrated classroom. The teacher assists students in developing checklists for task completion and appropriate classroom behavior.
   ii) At Tier 2, this strategy is done with small groups. Individual students reward themselves for appropriate behavior and performance. Student uses self-developed checklist and gives reward to self upon completion.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time. Individual students reward themselves for appropriate behavior and performance.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP
   v) At first the teacher stops the class occasionally and points out appropriate learning or behavior taking place, rewarding with points or praise.
vi) As students become familiar with what is desired, they can check off points on their own checklists.
   (1) Individual students reward themselves for appropriate behavior and performance at specific check-in points during the lesson. Eventually each student uses self-developed checklist and gives reward to self upon completion of tasks.

vii) Facilitates language development related to cognitive academic language.

c) Research base
   i) Tomlinson (1999) pp 66-68

d) What to watch for with ELL/CLD students
   i) ELL students who are LEP may need the process explained in their most proficient language.
   ii) Points are not intrinsically reinforcing. What is rewarding to one person is not necessarily rewarding to another. This is another learned preference.
   iii) The points may be paired with some more directly rewarding action and then gradually just use points.

**Sheltered interactions**

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Develop confidence in school culture interactions
   iii) Develop higher tolerance
   iv) Facilitate access of prior knowledge

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher develops a game or other casual group interaction activity. Teacher or specialist explains in home and community language when possible, what is going to occur and whom the students are going to meet. The home and community culture students are introduced to the school culture students and they engage in the game or activity together.

c) Research base

d) What to watch for with ELL/CLD students
   i) It is important to have the example speakers be people with whom the students are familiar and comfortable.
   ii) This can be paired with role play of school interactions.

**Sheltered Language**
a) Purpose of the Strategy
   i) Develop cognitive academic language proficiency
   ii) Develop content area skills
   iii) Reduce distractibility
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher presents lessons with concrete models and demonstrations of both content and expected performance. Language is simplified and content focused.
c) Research base
d) What to watch for with ELL/CLD students
   i) Building familiarity is critical for the success of this strategy. Not all ELL/CLD students will know what the objects or models represent.
   ii) The teacher will need to introduce the models or objects in full scale representations or use the actual items to build a true understanding. Only after students have actually seen, felt, smelled, and possibly tasted an apple will they respond to a picture of an apple.

Shortening Student Assignments
a) Purpose of the Strategy
   i) Access prior knowledge
   ii) Build awareness of learning
   iii) Develop personal control of situations
   iv) Reduce off-task behaviors
   v) Develop thinking and planning skills
b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) The teacher provides the student with shortened versions of specific assignments, or the complete assignment is presented in several short segments rather than all at one time. This helps make difficult or complex tasks become more manageable, less threatening and less overwhelming to the student.
   iv) For example, teacher assigns the student one section of a geography text. Then, teacher structures a group to jigsaw information from the rest of text to share with the student.
c) Research base

j) What to watch for with ELL/CLD students
   i) Learning to survive and thrive in a new environment is challenging for anyone. This can be especially difficult for ELL and CLD learners as they learn to interact in a new language and with new academic content and expectations.
   ii) Breaking a task into specific short segments while retaining the core content objectives will facilitate learning for diverse learners.

**Signals**

a) Purpose of the Strategy
   i) Facilitate nondirective guidance about student misbehavior
   ii) Prevent minor inappropriate behaviors from escalating
   iii) Reduce specific attention to the students’ misbehaving

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Use nonverbal cues or signals to control inappropriate behavior.
   v) For example, teacher flicks the classroom lights on and off when the noise level in the class becomes too loud.

c) Research base
   iii) Rogers, B. (2006)

b) What to watch for with ELL/CLD students
   i) Always introduce signals to ELL and CLD students by explaining them in their most proficient language.
   ii) ELL/CLD students who have had prior schooling might be asked what sort of signals they were familiar with and that could become part of the classroom routine.

**Sound clues (SSCD)**

a) Purpose of the Strategy
   i) Build awareness of learning
   ii) Build transfer skills
   iii) Develop personal control of situations
   iv) Develop thinking and planning skills
   v) Improve access to prior knowledge
   vi) Reduce off-task behaviors
   vii) Strengthen language development

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iii) SSCD encourages students to remember to use sound, structure, and context clues to address unfamiliar vocabulary. This is followed by dictionary usage if necessary. The steps in SSCD are:
   (a) Sound clues used
   (b) Structure clues used
   (c) Context clues used
   (d) Dictionary used

c) Research base
   i) Opitz (1998) pp 82-83

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the SSCD steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

STAR

a) Purpose of the Strategy
   i) Build awareness of learning
   ii) Develop personal control of situations
   iii) Improve access to prior knowledge
   iv) Reduce off-task behaviors
   v) Strengthen language development

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) This strategy can be used for all content areas and for behavior modification. Students can make cue cards for each step. The steps in STAR are:
      (1) Stop
      (2) Think
      (3) Act
      (4) Review

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the STAR steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.
Student Input

a) Purpose of the Strategy
   i) Facilitate students’ ownership in their education.
   ii) Access prior knowledge
   iii) Expand and elaborates
   iv) Build transfer skills

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) Include students in the decision-making process as general curricular activities are developed. Allow students to select some specific topics to be covered in an upcoming unit of study. The learner is encouraged to provide ideas and suggestions for selected daily curricular activities, keeping within the general parameters of the required elements. This gives the student greater ownership and more motivation to complete challenging assignments.

c) Research base

d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students will have limited experience with schooling in settings where they are expected to speak out and volunteer information or ideas.
   ii) These students will need to be directly taught how and when to provide input in an appropriate manner.
   iii) Discussion about providing input may be done in any language to facilitate understanding.

Success

a) Purpose of the Strategy
   i) Develop personal control of situations
   ii) Develop thinking and planning skills
   iii) Facilitate student self-concept as a successful person
   iv) Improve confidence and self-esteem
   v) Improve retention
   vi) Utilize prior knowledge

b) How to do it
   i) At Tier 1, this strategy is part and parcel of the modus operandi in the general classroom.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The teacher ensures that each student successfully completes assigned tasks, by initially reducing the level of difficulty of materials and gradually increasing the level of difficulty as easier tasks are met with success. Teacher also reduces the
complexity level of vocabulary or concepts in written material to help the student complete a reading task. Through this strategy, learners may read material similar to others in the class without requiring an excessive amount of individual attention from the teacher.

vi) For example, teacher places a transparency over a page of written material and, with a fine-point marker, cross out the more difficult words and writes simpler equivalents of those words above or in the margin next to the crossed-out words. As the student reads, he or she substitutes the simpler words for those marked out.

c) Research base

d) What to watch for with ELL/CLD students
   i) The teacher needs information or professional development about all of the diverse learning styles, cultures, and languages in the classroom in order to design accessible learning activities for all students.
   ii) There is as much diversity within the ELL and CLD population as there is between the non-ELL and ELL population as a whole.

Survival strategies for parents/families

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Build awareness of appropriate behaviors for school language and rules
   iii) Develop confidence in school culture interactions
   iv) Develop personal control of situations
   v) Reduce culture shock

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Liaison or specialist identifies basic “rules” of social and formal interaction that parents will need to know immediately. Parents may identify situations where they have made mistakes or which they would like assistance with. Facilitator and parents discuss situations and what is expected within these situations. Parents practice and discuss their responses and strategies in these situations, with opportunity for student input.

c) Research base
   i) Carrigan (2001) pp 54-58

d) What to watch for with ELL/CLD students
   i) Particular social groups and cultures have different expectations of adult and children when it comes to being accountable for task completion. This is a learned difference between cultures. The teacher needs to be aware that the expectations in an American
school may need to be taught directly to CLD students and not just assumed to be understood.

iii) One way to introduce the idea of behavior and strategies specific to your classroom is to ask students about how their parents have them behave at home or learned playing games. This can then be expanded to the idea of acting appropriately in a classroom.

iv) Demonstrate all of the desired behaviors and strategies. Some role play may be helpful. Examples of bad behaviors may be used with caution.

**Survival strategies for students**

a) Purpose of the Strategy
   i) Build awareness of appropriate behaviors for school language and rules
   ii) Build transfer skills
   iii) Develop confidence in school culture interactions
   iv) Develop personal control of situations
   v) Reduce response fatigue

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher identifies basic “rules” of social and formal interaction that students will need to know immediately. Students may identify situations where they made mistakes. Teacher, assistant, and peers discuss situations and what interactions are expected. Students may need to practice these interactions.

c) Research base

d) What to watch for with ELL/CLD students
   i) Particular social groups and cultures have different expectations of adult and children when it comes to following rules. This is a learned difference between cultures. The teacher needs to be aware that the expectations in an American school may need to be taught directly to CLD students and not just assumed to be understood.
   ii) One way to introduce the idea of behavior and strategies specific to your classroom is to ask students about how their parents have them behave at home or learned playing games. This can then be expanded to the idea of acting appropriately in a classroom.
   iii) Demonstrate all of the desired behaviors and strategies. Some role play may be helpful. Examples of bad behaviors may be used with caution.
Test-taking strategy - PIRATES

a) Purpose of the Strategy
   i) Improve test-taking skills for typical achievement tests

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) PIRATES may assist learners to complete tests more carefully and successfully. Students can create cue cards of the mnemonic and use them to work through each test and individual test item. The steps in PIRATES are:
      (1) Prepare to succeed
      (2) Inspect instructions carefully
      (3) Read entire question, remember strategies and reduce choices
      (4) Answer question or leave until later
      (5) Turn back to the abandoned items
      (6) Estimate unknown answers by avoiding absolutes and eliminating similar choices
      (7) Survey to ensure that all items have a response

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the PIRATES steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Test-taking strategy - SCORER

a) Purpose of the Strategy
   i) Improve test-taking skills

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) This test-taking strategy provides a structure for completing various tests by assisting the student to carefully and systematically complete test items. The steps in SCORER are:
      (1) Schedule time effectively
      (2) Clue words identified
      (3) Omit difficult items until the end
      (4) Read carefully
(5) Estimate answers requiring calculations
(6) Review work and responses
c) Research base
d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the SCORER steps modeled and explained in their
      most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves
      to facilitate their learning this process.

**Time-out**

a) Purpose of the Strategy
   i) Facilitate student regaining control over self
b) How to do it
   i) Promotes student thinking about own behavior and behavioral expectations of
      teacher.
   ii) Student is removed temporarily from the immediate environment to reduce external
      stimuli.
   iii) For example, teacher removes a student to a quiet or time-out area for 3-5 minutes
      when student is unable to respond to a situation in a non-aggressive manner.
c) Research base
   i) Harwell (2001) p 129
d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students have limited experience with public schools and the rules
      expected in the classroom.
   ii) Time-outs should be explained to the student in their most proficient language before using
      them or while taking them out of a situation.

c) Research base
   i) Harwell (2001) p 129
d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students have limited experience with public schools and the rules
      expected in the classroom.
   ii) Time-outs should be explained to the student in their most proficient language before using
      them or while taking them out of a situation.

c) Research base
   i) Harwell (2001) p 129
d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students have limited experience with public schools and the rules
      expected in the classroom.
   ii) Time-outs should be explained to the student in their most proficient language before using
      them or while taking them out of a situation.

d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students have limited experience with public schools and the rules
      expected in the classroom.
   ii) Time-outs should be explained to the student in their most proficient language before using
      them or while taking them out of a situation.

d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students have limited experience with public schools and the rules
      expected in the classroom.
   ii) Time-outs should be explained to the student in their most proficient language before using
      them or while taking them out of a situation.

d) What to watch for with ELL/CLD students
   i) Some ELL and CLD students have limited experience with public schools and the rules
      expected in the classroom.
   ii) Time-outs should be explained to the student in their most proficient language before using
      them or while taking them out of a situation.

**Total physical response**

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Build awareness of appropriate communication behaviors for school language and
      rules
   iii) Develop confidence in school language and rules for academic and social interactions
   iv) Develop cognitive academic language
   v) Reduce code-switching
   vi) Reduce stress for new students
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be
      included in the IEP.
   iv) A popular and effective way of teaching language that actively involves the students
      and focuses on understanding the language rather than speaking it. TPR method asks
the students to demonstrate that they understand the new language by responding to a command with an action. At first, the teacher gives the commands and does the actions along with the student. As the student understands the vocabulary, the teacher stops doing the action and has the student do the action alone. Later, the student can give commands to other students or to the teacher.

v) Teacher and assistant model words and phrases in action in various school settings, both in and out of the classroom. For example, teaching the response to a question such as “what is this” or “what can you do with this” by saying and acting out the phrases “This is a pencil.” “This pencil is used for writing on paper.” Students take different roles in the interactions and practice these with each other and with the teacher. Expansion: Students may suggest communication situations in which they would like specific assistance.

c) Research base
   i) Asher (1980)
   iii) Collier (2003) p 351

d) What to watch for with ELL/CLD students
   i) Although this is a common beginner or newcomer strategy for use with ELL students, the teacher must still be cautious about making assumptions about CLD students understanding of the actions required in the classroom.
   ii) The teacher must clearly model and act out every action required before asking students to repeat the action.

**Touch**

a) Purpose of the Strategy
   i) Increase time on-task
   ii) Build student’s self-awareness of behavior

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Use touch to minimize misbehaviors and convey messages to learners.
   v) For example, if a student is looking around the room during independent work-time, the teacher can walk up to the student and gently tap on the student’s shoulder as a signal to focus on the assignment.

c) Research base

d) What to watch for with ELL/CLD students
   i) All cultures have guidelines about how a person can touch another person. These are mostly unspoken and learned through being raised in the culture and community where touching another person is seen and remarked upon by those around you.
ii) These touch relations are also affected by whether someone is related to the other person. These relative positions convey power and control relationships which vary from culture to culture.

iii) The teacher must familiarize herself with the touch ‘rules’ of the various cultures represented in her classroom before expecting to use touch strategically to promote learning.

Transition activity for families & community groups

a) Purpose of the Strategy
i) Improve confidence in home and community culture/school culture interactions
ii) Strengthen school/parent partnerships
iii) Build awareness of appropriate communication behaviors for school language and rules
iv) Reduce anxiety and stress

b) How to do it
i) At Tier 2, this strategy is done with small groups.
ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
iv) Community liaison takes families on field trips to various educational and significant sites in the area. Families are given a preview of site, relevant activities, and explanations in home and community language when possible, before trip. Examples are visits to schools, libraries, museums, zoos, colleges, aquariums, and factories.

c) Research base
i) Carrigan (2001) p 52-53

d) What to watch for with ELL/CLD students
Use of first language

a) Purpose of the Strategy
i) Build transfer skills
ii) Develop confidence in school language and rules for academic and social interactions
iii) Develop cognitive academic language
iv) Improve motivation
v) Minimize behavior problems
vi) Reduce code-switching
vii) Build upon existing language strengths of student
viii) Develop cognitive academic language
ix) Build awareness of appropriate academic behavior
x) Strengthen knowledge of academic content

b) How to do it
i) At Tier 1, this strategy is done within the general education classroom with a bilingual student, assistant, or other volunteer working in coordination with the classroom teacher.
ii) At Tier 2, this strategy is done with small groups.
iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
v) Teacher directs an advanced-fluency student or volunteer to lead a guided activity in the home and/or community language.
vi) Students can retell parts of a story in pairs after the directed activity rather than have one student speak while the others all listen. Students then write their own summaries of what they have heard.
vi) Writing can be in either home or community language or English. During this time the students have a chance to help each other. Advanced-fluency students can dramatize and create dialog to illustrate the action.

c) Research base
i) Carrigan (2001) p 191

d) What to watch for with ELL/CLD students
i) The language helper can prepare the ELL/LEP students for an English lesson by reviewing key vocabulary words, explaining what will be occurring and discussing what the teacher’s expectations will be for the students’ performance. This would then be followed by the teacher presenting the lesson in English. Students would be given the opportunity to ask for specific clarification in their first language.
ii) Students could work on their projects subsequent to the English lesson with the assistance of the bilingual helper as needed. Content discussion and clarification should be in the students’ most proficient language while they are preparing their task or project for presentation in English with the rest of the class.
Varied grouping

a) Purpose of the Strategy
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Teacher uses flexible grouping arrangements to facilitate learning among diverse group of learners. For example, large group setting for introducing the general unit, small groups for research and jigsaw activities, pairs for sharing information and ideas about the topic, then returning to large group where individual teams can share their information with the whole class.

c) Research base

d) What to watch for with ELL/CLD students

Videotapes & booklets about interaction patterns in North America

a) Purpose of the Strategy
   i) Build awareness of school culture expectations
   ii) Develop familiarity with school language and rules for academic and social interaction patterns
   iii) Reduce culture shock
b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Groups of students and/or their families view videos developed locally or available from Intercultural Press and others about life in North America and about interacting with North Americans. Best if shown in home and community language and with an experienced facilitator.
c) Research base
d) What to watch for with ELL/CLD students
   i) There are many dialects of spoken English and differences of opinion about what is the “proper” dialect to use as the model for ELL/CLD students.
   ii) The teacher should be aware of the diversity of reaction to specific dialects of spoken English in North America and be prepared to address expressions of prejudice or value judgments about certain speakers shown on the videotapes.
   iii) The most practical way to deal with this is to pre-screen the videos and select segments that most closely represent the dialects common in your local communities, plus a few as examples of the diversity that exist in our country.
Videotapes & booklets about North American schools, communities, social service providers, laws

a) Purpose of the Strategy
   i) Build awareness of appropriate academic behavior
   ii) Build transfer skills
   iii) Reinforce school/parent partnership
   iv) Reduce culture shock
   v) Develop personal control of situations

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Groups of students and/or their families view videos developed locally or available from national organizations and others about public schools and about interacting with service personnel. Best shown in home and community language and with facilitator. Students are encouraged to discuss with their families what they see and experience in school.

c) Research base
   i) Carrigan (2001) pp 54-58

d) What to watch for with ELL/CLD students
   i) There are some excellent locally produced materials about school and service options within and for specific communities. The local school district may keep these in the media center. They may also be available through a local college or university.
   ii) The teacher should be aware of the diversity of reaction to depictions of official or government agencies and laws. These can raise the “affective filter” or emotional response of both students and parents to discussions about services.
   v) Always have interpreters available for in depth discussion of the materials presented.

Videotapes & booklets of school procedures & expectations

a) Purpose of the Strategy
   i) Build awareness of appropriate academic behavior
   ii) Build transfer skills
   iii) Build awareness of appropriate cognitive academic language
   iv) Develop personal control of situations
   v) Reinforce school/parent partnership

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

iv) Groups of students and/or their families view videos developed locally or available from Intercultural Press and others about public schools and about interacting with school personnel. Best if shown in home and community language and with facilitator. Students are encouraged to discuss with their families what they see and experience in school.

c) Research base
   i) Carrigan (2001) pp 54-58

d) What to watch for with ELL/CLD students
   i) Always introduce school expectations and rules to ELL and CLD students by explaining them in their most proficient language.
   ii) ELL/CLD students who have had prior schooling might be asked what sort of rules and expectations they were familiar with and that could become part of the classroom routine.
   iii) There are some excellent locally produced materials about school and service options within and for specific communities. The local school district may keep these in the media center. They may also be available through a local college or university.
   iv) The teacher should be aware of the diversity of reaction to depictions of official or government agencies and laws. These can raise the “affective filter” or emotional response of both students and parents to discussions about services.
   v) Always have interpreters available for in depth discussion of the materials presented.

Visualization

a) Purpose of the Strategy
   i) Develop higher tolerance
   ii) Develop thinking and planning skills
   iii) Improve mnemonic retrieval
   iv) Improve retention

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.

   iv) Students put small red stop signs at the end of sentences in an assigned reading. As they read the passage, they stop at each sign and answer questions about the passage. They then make a picture in their mind of what the passage means. This is repeated for each subsequent passage with the “pictures” forming a moving visualization or “motion picture” of what the passage means. (I usually remind students to think of TV shows.) This visualization strategy can also be used with other content activities, in science and social studies for example. Steps for students to follow in implementing this strategy:
(a) Where do I stop?
(b) Who is doing what, where, how, and why?
(c) What do I see in my mind?
(d) How does this all go together?

v) When applying the Visualization strategy, students work through problems or tasks using the above sequence of self-monitoring questions.

vi) Suppose you are having your students read “The Story of Ferdinand” by Munro Leaf. You would have students work in pairs or in small mixed skill groups as they read this story together. They would help put small red “post-it” circles at the end of each sentence or at the end of two sentences, depending upon their skill level (step 1 of Rehearsal, “Where should I stop to think?”). Suppose one group was reading this passage, for example:

(1) All the other bulls who had grown up with him in the same pasture would fight each other all day. They would butt each other and stick each other with their horns. What they wanted most of all was to be picked to fight at the bull fights in Madrid. But not Ferdinand – he still liked to sit just quietly under the cork tree and smell the flowers.

vii) Students would take turns reading out loud to one another. The first reader would read up to the first red spot and stop. The students would then review the six ‘W’ questions about what had just been read (step 2 of rehearsal, “Who is doing what, where, when, how, and why?”). Who = the other bulls, what = fight each other, where = in the pasture, when = all day. As this is the first sentence, the readers do not yet know the answers to all the questions (how & why = don’t know yet). After answering the questions, the group will next take turns telling the others how they visualize this sentence (step 3 of Rehearsal, “What picture do I see in my mind regarding these?”). The picture in the book shows the bulls gazing up at a poster about the bull fights in Madrid, so they will have to use their imagination about what it might look like to see these young bulls play fighting. They will then go on to read the next sentence and repeat step 2 & 3, this time adding step 4. Who = the bulls, what = fight each other, where = in the pasture, when = all day, how = butt each other and stick each other with their horns, why = still don’t know. They can now expand their first imaginative picture of these bulls by adding some action to the “movie” they are making in their minds (step 5 of Rehearsal, “What do I see when I put the pictures from each stop together?”). The group goes on the next sentence and repeats steps 2, 3, 4 and 5. Who = the young bulls, what = fighting, where = in the pasture, how = butting heads, why = to be picked to fight in Madrid. They expand their visualization to showing the longing of the young bulls while they are fighting. They then read the final sentence and complete the “movie” in their minds. Who = the young bulls and Ferdinand, what = the young bulls fighting and Ferdinand sitting, where = fighting in the pasture while Ferdinand is under the cork tree, how = fighting by butting their heads while Ferdinand is smelling flowers, why = the young bulls want to be picked to fight in Madrid but Ferdinand doesn’t want to do anything but smell the flowers.

viii) The use of the Visualization strategy will slow impulsive learners down, reinforce reflective habits, and guide students to more accurate understanding of what they are reading.
c) Research base
   i) Tovani (2000)
   ii) Harwell (2001)

d) What to watch for with ELL/CLD students
   i) Students with limited school experience will not know what ‘visualization’ means and will need to have direct instruction in the vocabulary and actions expected.
   ii) This can be introduced in the primary language and examples given from literature and art with which the students are more familiar.

Visualization - RIDER

a) Purpose of the Strategy
   i) Build transfer skills
   ii) Expand and elaborate on learning foundation
   iii) Improve access to prior knowledge
   iv) Improve retention of information
   v) Improve reading comprehension
   vi) Strengthen language development

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) This visualization strategy cues the learner to form a mental image of what was read and assists the student in making connections with previously learned materials. The steps in Rider are:

   1) Read a sentence
   2) Image (form a mental picture)
   3) Describe how new information differs from previous
   4) Evaluate image to ensure it is comprehensive
   5) Repeat process with subsequent sentences

c) Research base

d) What to watch for with ELL/CLD students
   i) Students with limited school experience will not know what ‘visualization’ means and will need to have direct instruction in the vocabulary and actions expected.
   ii) This can be introduced in the primary language and examples given from literature and art with which the students are more familiar.
   iii) Newcomers will need to have the RIDER steps modeled and explained in their most proficient language before they can proceed independently.
   iv) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.
Writing Strategy (PENS)

a) Purpose of the Strategy
   i) Strategy for writing and composition skills to expand language arts capabilities
   ii) Appropriate for developing basic sentence structure

b) How to do it
   i) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   ii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iii) PENS is appropriate for developing basic sentence structure and assists students to write different types of sentences following formulas for sentence construction. The steps in PENS are:
       (1) Pick a formula
       (2) Explore different words that fit the formula
       (3) Note the words selected
       (4) Subject and verb selections follow

c) Research base

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the PENS steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.

Wordless picture books

a) Purpose of the Strategy
   i) Improve sequencing skills
   ii) Facilitate reading process
   iii) Improve vocabulary

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) Using wordless picture books with emerging readers of all ages is very effective. It builds upon the learner’s oral language skills to develop the reading process. This allows for variations in phonology, syntax, vocabulary, intonation, etc., to be accommodated in an integrated classroom, i.e., all students can participate in the activity regardless of reading level. The teacher selects a wordless picture book of high interest content to the students. Wordless picture books are available at all age/grade levels. The students can “read” the pictures in small groups or individually, telling the “story” as they see it. Students can also make their own wordless picture books.
c) Research base
   i) Opitz (1998) pp 130-135

d) What to watch for with ELL/CLD students
   i) Teachers may need to model how to go through a book, how to follow the sequence of the story through the pictures.
   ii) Begin with pictures the students recognize from their own experiences. Introduce new and unusual illustrations after the students understand what the process of reading is like in a wordless picture book.
   iii) Another variation on this is to use modern “pop-up” books for telling the story. Some of these are quite sophisticated and may be used in math and science lessons as well.

Writing strategies – DEFENDS

a) Purpose of the Strategy
   i) Assist learners to defend a particular position in a written assignment

b) How to do it
   i) At Tier 2, this strategy is done with small groups.
   ii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iii) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   iv) The DEFENDS writing strategy framework provides a structure for completing initial and final drafts of written reports.
   v) It may be used effectively with the COPS proofreading strategy structure.
   vi) To help the students remember the steps in DEFENDS, the teacher can provide the students with a printed form with the letters D,E,F,E,N,D S down the left side and their meaning under each letter.
   vii) The steps in DEFENDS are:
       (1) Decide on a specific position
       (2) Examine own reasons for this position
       (3) Form list of points explaining each reason
       (4) Expose position in first sentence of written task
       (5) Note each reason and associated points
       (6) Drive home position in last sentence
       (7) Search for and correct any errors

c) Research base
   ii) Ellis, E. S., & Lenz, B. K. (1987)

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the DEFENDS steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.
Writing strategies - TOWER

a) Purpose of the Strategy
   i) Build awareness of learning
   ii) Develop personal control of situations
   iii) Develop thinking and planning skills
   iv) Improve access to prior knowledge
   v) Reduce off-task behaviors
   vi) Strengthen language development

b) How to do it
   i) At Tier 1, this strategy is done within the general education classroom with mixed groups of students.
   ii) At Tier 2, this strategy is done with small groups.
   iii) At Tier 3, this strategy is done in individualized, focused intensive periods of time.
   iv) At Tier 4, this strategy is done in specially designed individual programs and may be included in the IEP.
   v) The TOWER writing strategy framework provides a structure for completing initial and final drafts of written reports.
   vi) It may be used effectively with the COPS proofreading strategy structure.
   vii) To help the students remember the steps in TOWER, the teacher can provide the students with a printed form with the letters T,O,W,E,R down the left side and their meaning under each letter.
   viii) The steps students follow in TOWER are:
        (1) Think
        (2) Order ideas
        (3) Write
        (4) Edit
        (5) Rewrite

c) Research base
   iii) Ellis, E. S., & Lenz, B. K. (1987)

d) What to watch for with ELL/CLD students
   i) Newcomers will need to have the TOWER steps modeled and explained in their most proficient language before they can proceed independently.
   ii) Students can be paired with partners that are slightly more bilingual than themselves to facilitate their learning this process.
